PREFACE TO THE FIRST EDITION	iii
PREFACE TO THE SECOND EDITION	v
PREFACE BY ROBERT HERMANN	vii
TRANSLATOR'S ACKNOWLEDGEMENTS	ix
Chapter 1: CARTESIAN CO-ORDINATES: VECTORS, MULTIVECTORS, TENSORS	1
I. Vectors, Cartesian co-ordinates	1
II. Bivectors, systems of bivectors	4
III. Trivectors	11
IV. Multivectors	14
V. Supplementary multivectors	15
VI. Sliding or bound multivectors	18
VII. Application to the motion of a rigid body having a fixed point	19
VIII. Tensors, tensor algebra	20
Chapter 2: CURVILINEAR CO-ORDINATES IN EUCLIDEAN GEOMETRY	29
I. The spatial line element in Cartesian co-ordinates	29
II. The fundamental theorem of metric geometry	31
III. The local reconstruction of a space in terms of its line element	34
IV. Absolute differentiation. Kinematical applications. Lagrange's equations	37
V. Tensor analysis	43
VI. The necessary condition to be satisfied by the Euclidean line element	48
VII. Euclidean line elements	52
Chapter 3: LOCALLY EUCLIDEAN RIEMANNIAN SPACE	57
I. The concept of a manifold	57
II. Locally Euclidean Riemannian space	59
III. Normal locally Euclidean Riemannian space	63
IV. The holonomy group of a normal locally Euclidean Riemannian space	68
V. The fundamental polyhedron	70
VI. Determination of the normal locally Euclidean Riemannian spaces	73
VII. Two dimensional normal Euclidean spaces	74
VIII. Normal locally Euclidean Riemannian space and elementary geometry	82
Chapter 4: RIEMANNIAN SPACE AND EUCLIDEAN TANGENT AND OSCULATING SPACE	85
I. The Euclidean tangent space at a point	85
II. The Euclidean osculating space	89
III. The Euclidean space along a line	99
IV. Application to the theory of surfaces in ordinary space	105

	<u>Page</u>
Chapter 5: GEODESIC SURFACES. THE AXIOMS OF THE PLANE AND THE AXIOM OF FREE MOBILITY	111
I. Geodesic surfaces at a point. Severi's Theorem	111
II. Totally geodesic surfaces. Planes	112
III. The axiom of the plane and the axiom of free mobility in space	116
Chapter 6: NON-EUCLIDEAN GEOMETRIES. SPHERICAL SPACE. ELLIPTIC SPACE. HYPERBOLIC SPACE	125
I. Two dimensional spherical geometry	125
II. Two dimensional elliptic geometry	126
III. Two dimensional hyperbolic geometry	133
IV. Conformal representation of spherical and hyperbolic geometries	137
V. The displacement group of the non-Euclidean geometries —	146
VI. Three dimensional non-Euclidean space: projective representation	149
VII. Three dimensional non-Euclidean space: conformal representation	157
VIII. Normal Riemannian space, the locally spherical and hyperbolic cases	162
IX. Three dimensional Riemannian space satisfying the axiom of the plane	168
Chapter 7: RIEMANNIAN CURVATURE	173
I. The displacement associated with a cycle	173
II. The Riemann-Christoffel tensor	178
III. Riemannian curvature in two dimensional space	180
IV. Riemannian curvature in three dimensional space	185
V. Riemannian curvature in spaces of more than three dimensions. Spaces with constant Riemannian curvature	191
VI. The contracted curvature tensor. Principal directions	196
Chapter 8: THE BIANCHI IDENTITIES	197
I. Exterior differential forms	197
II. Differential tensor forms	204
III. The Bianchi identities	206
IV. Poincare's theorem in Riemannian space	207
V. Curvature vectors and their first representation	209
VI. Curvature vectors and their second representation	212
VII. Schur's theorem	214
Chapter 9: THE METHOD OF THE MOVING FRAME. MANIFOLDS EMBEDDED IN THREE DIMENSIONAL RIEMANNIAN SPACE	217
I. Generalities	217
II. Completions to the theory of surfaces embedded in three dimensional Riemannian space	219
III. Curvature lines and asymptotic lines of a manifold embedded in a Riemannian space	225
IV. Riemannian spaces that satisfy the axiom of the plane	228

	<u>Page</u>
Chapter 10: NORMAL RIEMANNIAN CO-ORDINATES	231
I. Normal co-ordinates	231
II. The fundamental differential equations	232
III. The $ds^2$ of spaces with constant curvature expressed in normal co-ordinates	236
IV. Properties of the fundamental form in normal co-ordinates	238
V. Comparison of distances in Riemannian space and in normal osculating Euclidean space	241
VI. The parallelogramoid of Levi-Civita	244
VII. Geodesic triangles	245
VIII. Circles, spheres and hyperspheres	249
 Chapter 11: SYMMETRIES AND PARALLEL TRANSPORT. SYMMETRIC SPACES	 255
I. Symmetry and parallel transport	255
II. Symmetric Riemannian spaces	260
III. Rigid displacements of a symmetric space	263
IV. Irreducible symmetric spaces	264
 Chapter 12: RIGID DISPLACEMENT GROUPS IN RIEMANNIAN SPACE	 269
I. Generalities	269
II. Transitive and intransitive groups. Trajectories	270
III. Frames attached to a displacement group	271
IV. Riemannian spaces admitting a simply transitive displacement group	273
V. Canonical co-ordinates in a space admitting a simply transitive displacement group	277
VI. Canonical co-ordinates and normal co-ordinates	280
VII. Isogonal parallelism attached to a simply transitive displacement group	284
VIII. Riemannian spaces admitting a multiply transitive displacement group	290
IX. Three dimensional space admitting a multiply transitive group	296
X. General intransitive displacement groups	303
XI. Displacement groups whose trajectories are lines or surfaces	306
 Chapter 13: ISOMETRIC RIEMANNIAN SPACES. RIGID DISPLACEMENTS IN A GIVEN SPACE	 309
I. Isometric Riemannian spaces	309
II. An analytical problem	312
III. The general problem concerning the mapping of Riemannian spaces	315
IV. The maximum displacement group of a given Riemannian space	322
V. Killing's equations	324
 NOTE I: On the Axiom of the Plane and Cayleyian geometry	 327
NOTE II: On Linear Riemannian Curvature	335
NOTE III: On Normal Spaces with Zero or Negative Riemannian Curvature	339
