

# CONTENTS

<b>Basic notation</b>	xvii
<b>I. Linear operators in Banach spaces</b>	1
1. Compact linear maps	1
2. Measures of non-compactness	12
3. Fredholm and semi-Fredholm maps	27
4. The essential spectrum	39
<b>II. Entropy numbers, <math>s</math>-numbers, and eigenvalues</b>	46
1. Entropy numbers	47
2. Approximation numbers	53
3. An axiomatic approach to $s$ -numbers	71
4. Non-compact maps	77
5. Compact linear operators in Hilbert spaces	80
<b>III. Unbounded linear operators</b>	95
1. Closed and closable operators	95
2. Numerical range and field of regularity	99
3. Extensions of closed operators and adjoint pairs	101
4. Symmetric and self-adjoint operators	107
4.1. General remarks	107
4.2. Symmetric and self-adjoint extensions of symmetric operators	110
5. $J$ -symmetric and $J$ -self-adjoint operators	114
5.1. General remarks	114
5.2. $J$ -self-adjoint and regularly solvable extensions of $J$ -symmetric operators	116
6. Accretive and sectorial operators	119
7. Relative boundedness and relative compactness	122
8. Stability results	127
9. Multiplication operators	133
10. Second-order linear differential operators	135
10.1. Quasi-differential equations	135
10.2. The regular problem on $[a, b]$	137
10.3. The case of one singular end-point	144
10.4. The case of two singular end-points	155
10.5. The limit-point, limit-circle results of Sims	158
10.6. Examples	162
<b>IV. Sesquilinear forms in Hilbert spaces</b>	168
1. Bounded coercive forms and the Lax–Milgram Theorem	168
2. Sectorial forms	172
3. The polar decomposition of closed operators	180
4. Forms of general self-adjoint operators and their perturbations	183

5. Perturbation of sectorial forms	191
6. Variational inequalities	196
<b>V. Sobolev spaces</b>	201
1. Function spaces, approximation and regularization	201
1.1. Spaces of continuous functions	202
1.2. Functions in Lebesgue spaces	204
1.3. Partitions of unity	208
1.4. The maximal function	209
1.5. The Fourier transform	212
2. Weak derivatives	215
3. Sobolev spaces: definitions and basic properties	220
3.1. Foundations	220
3.2. Embeddings and inequalities for $W_0^{k,p}(\Omega)$	227
3.3. More embeddings: continuity properties	234
3.4. Poincaré inequalities	241
4. The boundary of $\Omega$	243
4.1. Boundaries of class $C^{k,\gamma}$	244
4.2. Other conditions on the boundary	246
4.3. A density property	248
4.4. Extension properties	250
4.5. Embedding theorems for $W^{k,p}(\Omega)$	262
4.6. More about compact embeddings	266
4.7. The Poincaré inequality	269
4.8. The approximation of bad boundaries by very smooth ones	270
4.9. A counterexample	272
5. Measures of non-compactness	274
5.1. Bounded and precompact sets in $L^p(\Omega)$ ( $1 \leq p < \infty$ )	275
5.2. A formula for $\alpha(I)$ and $\tilde{\beta}(I)$ ( $I: W^{1,p}(\Omega) \rightarrow L^p(\Omega)$ , $1 \leq p < \infty$ )	277
5.3. The Poincaré inequality and $\alpha(I)$	281
5.4. Estimates for $\tilde{\beta}(I_0)$ and $\beta(I_0)$	284
6. Embeddings and approximation numbers	289
<b>VI. Generalized Dirichlet and Neumann boundary-value problems</b>	300
1. Boundary-value problems	300
1.1. The weak Dirichlet problem	300
1.2. Eigenfunction expansions for the Dirichlet problem	308
1.3. The weak Neumann problem	310
2. Truncation rules on $W^{1,p}(\Omega)$	311
3. A partial ordering on $W^{1,p}(\Omega)$	315
4. A weak maximum principle	318
5. Capacity	322
<b>VII. Second-order differential operators on arbitrary open sets</b>	326
1. Quasi- $m$ -sectorial Dirichlet and Neumann operators	326
1.1. The Dirichlet problem on $\Omega$	327
1.2. The Neumann problem on $\Omega$	339

1.3.	$\tau = -\Delta + q$ with $q \in L_{loc}^{n/2}(\Omega)$ when $n \geq 3$	340
1.4.	General second-order elliptic operators in $L^2(\Omega; w)$	344
1.5.	Examples	351
2.	$M$ -accretive realizations of $\tau = -\Delta + q$	357
2.1.	Kato's inequality	357
2.2.	Kato's Theorem	359
2.3.	Supplementary results	364
3.	$\tau = -\Delta + q$ with $\text{im } q$ semi-bounded	366
3.1.	Local properties of $\mathcal{D}(T)$	367
3.2.	Sufficiency conditions for $T_0 = T$	372
4.	Schrödinger operators with strongly singular potentials	382
5.	Further remarks on self-adjointness and quantum mechanics	387
<b>VIII.</b>	<b>Capacity and compactness criteria</b>	<b>389</b>
1.	Capacity and its basic properties	389
2.	Some integral inequalities	393
3.	Compactness criterion for the embedding $W_0^{1,p}(\Omega) \rightarrow L^p(\Omega)$	402
4.	Molcanov's criterion for a discrete spectrum	404
5.	Continuous representatives of $W^{1,p}(\Omega)$	407
6.	Density results for $C_0^\infty(\Omega)$	410
<b>IX.</b>	<b>Essential spectra</b>	<b>414</b>
1.	General remarks	414
2.	Invariance of the essential spectra under perturbations	418
3.	Operators with a compact resolvent	423
4.	Finite-dimensional extensions	424
5.	Direct and orthogonal sums of operators	425
6.	Constant-coefficient operators in $L^2(\mathbb{R}^n)$	429
7.	Constant-coefficient operators in $L^2(0, \infty)$	434
8.	Relatively bounded and relatively compact perturbations of constant-coefficient operators	440
9.	The Decomposition Principle for operators in $L^2(a, \infty)$	445
<b>X.</b>	<b>Essential spectra of general second-order differential operators</b>	<b>454</b>
1.	A Decomposition Principle	454
2.	Essential spectra of realizations of $\tau = -\Delta + q$ in $L^2(\Omega)$	458
3.	Essential spectra of general second-order operators in shells	462
4.	Perturbation results	466
5.	A result of Persson	473
6.	The essential spectrum of $-\Delta_{D,\Omega}$	476
6.1.	Quasi-conical, quasi-cylindrical, and quasi-bounded domains	477
6.2.	A mean distance function	481
<b>XI.</b>	<b>Global and asymptotic estimates for the eigenvalues of <math>-\Delta + q</math> when <math>q</math> is real</b>	<b>488</b>
1.	The Max-Min Principle for semi-bounded self-adjoint operators	489
2.	Bounds for $N(\lambda, T_{D,\Omega})$ and $N(\lambda, T_{N,\Omega})$	495
2.1.	The operators $T_{D,\Omega}$ and $T_{N,\Omega}$	495
2.2.	Variation of eigenvalues	498

2.3. The eigenvalues of $-\Delta_{D,q}$ and $-\Delta_{N,q}$	500
2.4. The main estimates	505
3. The case $\lambda \rightarrow \infty$ : an example	508
4. The case $\lambda \rightarrow 0^-$ : an example	514
4.1. The tessellation	515
4.2. The spectrum	519
5. The case $\Omega = \mathbb{R}^n, q \in L^{n/2}(\mathbb{R}^n), n \geq 3$	526
<b>XII. Estimates for the singular values of <math>-\Delta + q</math> when <math>q</math> is complex</b>	<b>535</b>
1. Introduction	535
2. Bounds for $M(\lambda, T_D, \Omega)$ and $M(\lambda, T_N, \Omega)$	536
2.1. The Dirichlet and Neumann operators	536
2.2. A lower bound for $M(\lambda, T_D, \Omega)$	538
2.3. An upper bound for $M(\lambda, T_D, \Omega)$	543
3. Asymptotic results for $\lambda \rightarrow \infty$	547
4. The $l^p$ classes of the singular values and eigenvalues	552
5. Perturbation results	554
