

# Contents

Preface	vii
Chapter 1. Summary	1
Chapter 2. Dynamics	11
2.1. Smale spaces	11
2.2. Shifts of finite type	15
2.3. Maps	18
2.4. Self-products of a map	19
2.5. $s/u$ -resolving and $s/u$ -bijective maps	21
2.6. $s/u$ -bijective pairs	28
2.7. Technical results	32
Chapter 3. Dimension groups	37
3.1. Free abelian groups	37
3.2. The dimension group of a graph	38
3.3. The dimension group of a shift of finite type	40
3.4. The dimension group as a covariant functor	41
3.5. The dimension group as a contravariant functor	47
Chapter 4. The complexes of an $s/u$ -bijective factor map	55
4.1. Definitions of the complexes	56
4.2. Symbolic presentations	60
4.3. Equivalence of the complexes	69
4.4. Functorial properties	78
4.5. Independence of resolution	79
Chapter 5. The double complexes of an $s/u$ -bijective pair	85
5.1. Definitions of the complexes	85
5.2. Symbolic presentations	91
5.3. Equivalence of the complexes	97
5.4. Functorial properties	99
5.5. Independence of $s/u$ -bijective pair	100
Chapter 6. A Lefschetz formula	105
6.1. The statement	105
6.2. The periodic point side	106
6.3. The homological side	111
Chapter 7. Examples	113
7.1. Shifts of finite type	113

7.2. Totally disconnected stable sets	113
7.3. Solenoids	114
7.4. A hyperbolic toral automorphism	115
Chapter 8. Questions	117
8.1. Order on homology groups	117
8.2. Machinery	118
8.3. Relation with Čech (co)homology	119
8.4. $C^*$ -algebras	119
Bibliography	121
