<i>List of Tables</i>	xix
<i>Notation</i>	xxi
CHAPTER 1	
<i>Introduction • From Intuitive Concepts to the Definition of Symmetry</i>	1
Relative Equality • Equality as a Basis for Geometric Regularity and the Theory of Symmetry	1
Geometric Regularity	2
Symmetry as a Special Kind of Geometric Law	4
Symmetry, Beauty of Form, and Harmony	7
CHAPTER 2	
<i>Symmetry of One-Sided Rosettes</i>	11
Plane of Symmetry • Symmetry of Animals, Plants, Machines, and Other Objects	11
Symmetry Axis • Principle of Rotation and the Symmetry of Processes Occurring in Time	13
Enantiomorphism • Rightness and Leftness of Figures	16
Symmetry Axis Combined with Symmetry Planes	18
Formation of Symmetrical Rosettes • Cutting Rosettes from Paper • Role of Physical Factors	27
Polar and Nonpolar Planes and Axes	36
Singular Points, Lines, and Planes • Multiplicity of Points	37
Exact Definition of a One-Sided Rosette	39

CHAPTER 3

<i>Symmetry of Figures with a Singular Point</i>	41
Mirror–Rotation Axis and Center of Symmetry • The Symmetry of Crystals • Parallel and Antiparallel Segments and Planes . .	41
Symmetry Axis with a Perpendicular Plane m • Rotating Parts of Machines • Crystals • Symmetry of an Electric Voltaic Pile and a Cylindrical Magnet	45
Principal Axis Combined with Longitudinal and Transverse Planes m • Snowflakes, Machine Parts, and Everyday Objects	50
Principal Axis Combined with Two-Fold Transverse Axes • Twisted Shapes • Rotation of the Plane of Polarization	51
Principal Axis Combined with Planes and Two-Fold Axes	54
Regular Polyhedra	55
The Two Symmetry Classes of the Sphere • Optically Rotating Liquids • Spherulites	58
Review of the Symmetry Classes of Figures with a Singular Point • Spherical and Stereographic Projections of Symmetry Elements	62
Two Types of Figures with a Singular Point • One-Sided and Two-Sided Rosettes	65
Comparison of the Symmetry of Crystals and Organisms • Coordinate and Noncoordinate Notation for Symmetry Classes	66
Fedorov Kaleidoscopes for Producing Figures with a Singular Point	68
Systems of Equivalent Points • Molecules	69
Symmetrical Pencils of Straight Lines and Polyhedra • Simple Forms	72
Symmetry and the Structural Formulas of Molecules	73
Symmetry of Directed Quantities • Vectors and Tensors	75
Concluding Remarks	78

CHAPTER 4

<i>Symmetry of One-Sided Bands</i>	79
Translation Axis as a Necessary Symmetry Element of Bands • Border Decorations for Subway Passages and Intersections . .	79
Glide–Reflection Plane	82
Translation Axis with Transverse Two-Fold Axes • Border Decorations for Passages with Two-Way Traffic	84

Other Symmetry Classes of One-Sided Bands	86
Kaleidoscopes for Forming One-Sided Bands	93
Review of the Seven Symmetry Classes of One-Sided Bands.....	93
CHAPTER 5	
<i>Symmetry of Two-Sided Bands</i>	95
The Second-Order Screw Axis	95
The 31 Symmetry Classes of Bands	96
Cutting Bands from Paper.....	100
CHAPTER 6	
<i>Symmetry of Rods</i>	103
Rational and Irrational Screw Symmetry Axes • Screws.....	103
Basis for the Derivation of the Symmetry Classes of Rods	105
Rods Generated by Figures with One Symmetry Axis.....	105
Rods Generated by Figures with One Mirror–Rotation Axis.....	108
Rods Generated by Figures with Symmetry $n : m$	109
Rods Generated by Figures with Symmetry $n \cdot m$	110
Rods Generated by Figures with Symmetry $n : 2$	111
Rods Generated by Figures with Symmetry $\tilde{2}n \cdot m$	112
Rods Generated by Figures with Symmetry $m \cdot n : m$	113
Review of Rod Symmetry Types with Finite and Infinite Trans- lations.....	114
Limiting Symmetry Classes for Rods • Shafts with Pulleys • Screws • One-Dimensional Continua and Discontinua.....	117
Some Generalizations • Unified Principle of Symmetry Trans- formations in Three-Dimensional Space	123
CHAPTER 7	
<i>Symmetry of Network Patterns • Two-Dimensional Continua and Semicontinua</i>	129
Plane Nets	130
The 17 Symmetry Classes of Network Patterns (The Plane Space Groups) • Examples of Patterns in Folk Art	134
Projections of Symmetry Elements for Network Patterns • Coordinate and Noncoordinate Notation for Symmetry Classes	152
Network Patterns in Nature, Technology, and Art	155
Superposition of Network Patterns • Technical Applications • The Bragg Law • Beats	158

Cutting Network Patterns from Paper.....	169
Kaleidoscopes for Network Patterns.....	171
Parallelogons and Planigons • Their Use in Parquets.....	171
Regular Systems of Points • Law of Conservation of the Products of the Multiplicities of Points and Their Relative Numbers..	174
Plane Isogons and Isohedra • Parquets.....	175
Symmetry Mixing • The Perception of Vertical Planes.....	180
One-Sided Plane Continua.....	182
One-Sided Plane Semicontinua.....	185
 CHAPTER 8	
<i>Symmetry of Layers</i>	189
Symmetry Elements of Layers.....	189
Derivation of the Symmetry Classes of Layers • Representations and Notation.....	190
The 80 Symmetry Classes of Layers.....	195
Two-Sided Plane Continua and Semicontinua.....	197
Systemization of Symmetry Groups.....	198
 CHAPTER 9	
<i>Symmetry of Three-Dimensional Spaces • Discontinua and Continua..</i>	199
Kaleidoscopes for Three-Dimensional Periodic Discontinua of the Highest Symmetry.....	200
Space Lattices and Groups of Parallel Translations.....	203
The 230 Space Groups of a Discontinuum • Structure of Crystals.	207
Close Packing of Spheres • Its Significance for Crystallography and Building Technology.....	219
Fedorov Parallelohedra and Stereohedra.....	224
Law of Multiple Proportions in Structural Crystallography and Chemistry.....	225
Spatial Semicontinua with Two Axes of Continuous Translations.	228
Spatial Semicontinua with One Axis of Continuous Translations .	230
Symmetry of Three-Dimensional Continua.....	231
 CHAPTER 10	
<i>Elements of Group Theory • The Classical Crystallographic Groups..</i>	235
Definition of a Group • Groups of Transformations of Geometric and Physical Objects • Abstract Groups.....	235

Example: The Crystallographic Group $2/m$ • Groups of Permutations and Orthogonal Matrices Isomorphic with the Group $2/m$	237
Some Properties of Groups • Subgroups • Factor Groups • Homomorphic Relationships Between Groups.....	242
Extension of Groups by Means of Direct, Semidirect and Quasi-Products • Crystallographic Groups as Extensions of Rotation Groups	244
Space (Fedorov) Groups Φ as Extensions of the Translation Groups by Means of the Crystallographic Point Groups and Their Isomorphic Groups by Modulus	251
 CHAPTER 11	
<i>Groups of Generalized Symmetry • Antisymmetry and Colored Symmetry</i>	263
Crystallographic Antisymmetry Point Groups as Extensions of the Classical Crystallographic Groups by Means of the Groups $1', 2', m', \bar{1}', 4'(\text{mod } 2), \bar{4}'(\text{mod } 2)$	263
Antisymmetry Space (Shubnikov) Groups III as Extensions of the Classical Space (Fedorov) Groups Φ or as Extensions of the Translation Groups T	269
Crystallographic Point Groups of Colored Symmetry as Extensions of the Classical Crystallographic Groups by Means of the Groups of Color Permutations P and $G^{(p)*}$	280
The Colored Symmetry Space (Belov) Groups B as Extensions of the Classical Space (Fedorov) Groups Φ or as Extensions of the Translation Groups T	295
Limits to Symmetry Theory • Other Generalizations	303
 CHAPTER 12	
<i>Symmetry in Science and Art • Conservation Laws • Symmetrization and Dissymmetrization of Physical Systems • Principle of Symmetry for Composite Systems</i>	307
Symmetry and Structure • Symmetry as a Structural Law of Integral Systems and as a Method of Studying Structural Regularities	307
Transformation Laws and Symmetry of Physical Quantities (in the Approximation of a Homogeneous Continuum) • Limiting Groups of Antisymmetry and Colored Symmetry	313

Transformation Laws and Symmetry of Physical Quantities (in the Approximation of a Periodic Discontinuum) • Space Tensors in Colored Groups	321
Composite Systems • Principle of the Superposition of Symmetry Groups • Laws Governing Changes and Conservation of Symmetry.....	328
Relation Between the Symmetries and Properties of Systems • Symmetry of Physical Equations and Laws • Conservation Laws and Phase Transitions	337
Symmetry and Dissymmetry in Art • Laws of Composition • Structure-System Methods of Analyzing Artistic Creations..	350
Conclusion • Heuristic Significance of the Principles of Symmetry • Symmetry as a Philosophical Concept	366
<i>Resumé</i>	375
<i>Bibliography</i>	389
<i>Index</i>	409
