0	Introduction	1
1	Connectivity	9
2	Separation properties of polygons in \mathbf{R}^2	16
3	The Schönflies theorem for polygons in \mathbf{R}^2	26
4	The Jordan curve theorem	31
5	Piecewise linear homeomorphisms	42
6	PL approximations of homeomorphisms	46
7	Abstract complexes and PL complexes	52
8	The triangulation theorem for 2-manifolds	58
9	The Schönflies theorem	65
10	Tame imbedding in \mathbf{R}^2	71
11	Isotopies	81
12	Homeomorphisms between Cantor sets	83
13	Totally disconnected compact sets in \mathbf{R}^2	91
14	The fundamental group (summary)	97
15	The group of (the complement of) a link	101
16	Computations of fundamental groups	112
17	The PL Schönflies theorem in \mathbf{R}^3	117
18	The Antoine set	127
19	A wild arc with a simply connected complement	134
20	A wild 2-sphere with a simply connected complement	140
21	The Euler characteristic	147

22	The classification of compact connected 2-manifolds	155
23	Triangulated 3-manifolds	165
24	Covering spaces	174
25	The Stallings proof of the loop theorem of Papakyriakopoulos	182
26	Bicollar neighborhoods; an extension of the loop theorem	191
27	The Dehn lemma	197
28	Polygons in the boundary of a combinatorial solid torus	201
29	Limits on the loop theorem: Stallings's example	211
30	Polyhedral interpolation theorems	214
31	Canonical configurations	220
32	Handle decompositions of tubes	223
33	PLH approximations of homeomorphisms, for regular neighborhoods of linear graphs in \mathbf{R}^3	230
34	PLH approximations of homeomorphisms, for polyhedral 3-cells	239
35	The Triangulation theorem	247
36	The <i>Hauptvermutung</i> ; tame imbedding	253
	Bibliography	256
	Index	259
