Preface	v
CHAPTER 1	
Properties of Floating-Point Numbers	1
1.1. Introduction	1
1.2. Representation of Floating-Point Numbers	1
1.3. Characteristics of Floating-Point Numbers	4
1.4. Violation of the Laws of Arithmetic	8
1.5. Accurate Floating-Point Summation	11
CHAPTER 2	
Matrices, Norms, and Condition Numbers	20
2.1. Matrices	20
2.2. Vector and Matrix Norms	23
2.3. The Condition Number	26
CHAPTER 3	
Sparse Matrices	34
3.1. Introduction	34
3.2. Sparse Techniques for Null Elements Following a Pattern	35
3.3. Sparse Techniques with Null Elements in Random Locations	39
3.3.1. The Bit Map	39
3.3.2. Paired Vectors	42
3.3.3. The Linked List	47
3.3.4. Hashing	53
3.4. Conclusions	56
CHAPTER 4	
Introduction to Overdetermined Systems	67
4.1. Introduction	67
4.2. Mathematical Theory of Overdetermined Systems	69
4.3. Modeling Errors and Outliers	76
4.4. Solution of Linear Systems	80

CHAPTER 5	
Linear Least Squares	84
5.1. The Normal Equations	84
5.2. Solution of the Normal Equations	87
5.3. The Variance–Covariance and Correlation Matrices	93
5.4. Orthogonal Transformations	99
5.5. Iteratively Reweighted Least Squares	115
5.6. Constrained Least Squares	119
CHAPTER 6	
The L_1 Method	133
6.1. Introduction	133
6.2. General Considerations of the L_1 Solution	137
6.3. Linear Programming	140
6.4. The L_1 Algorithm and Error Estimates	153
CHAPTER 7	
Nonlinear Methods	168
7.1. Introduction	168
7.2. Gradient Methods	170
7.3. Nongradient Methods	183
CHAPTER 8	
The Singular Value Decomposition	199
8.1. Introduction	199
8.2. Calculating the SVD	202
8.3. Total Least Squares	209
8.4. Singular Value Analysis	218
Index	233
