

# Contents

## Preface

### **Part I: Basic Concepts**

1. Observations and Inferences 11
2. Counting, Probabilities  
and the Binomial Distribution 21
3. Samples and Populations 49
4. The Normal Distribution 70

### **Part II: Applied Non-parametric Methods**

5. Methods for Single Samples 85
6. Methods for Paired Samples 118
7. Methods for Two Independent Samples 129
8. Categories and Counts 151
9. Testing for Fit 175
10. Related Measurements 207
11. Parametric or Non-parametric? 234
12. Looking at the Exercises 238

Bibliography 251

Appendix:

Abridged Tables for Non-parametric Methods 253

Index 263
