

Contents

<i>Preface</i>	vi
1. Division of Figures into Pieces of Smaller Diameter	1
1.1. The Diameter of a Figure	1
1.2. Formulation of the Problem	3
1.3. Borsuk's Theorem	4
1.4. Convex Figures	7
1.5. Figures of Constant Width	12
1.6. Embedding in a Figure of Constant Width	14
1.7. For Which Figures is $a(F) = 3$?	19
2. Division of Figures in the Minkowski Plane	26
2.1. A Graphic Example	26
2.2. The Minkowski Plane	28
2.3. Borsuk's Problem in Minkowski Planes	34
3. The Covering of Convex Figures by Reduced Copies	40
3.1. Formulation of the Problem	40
3.2. Another Formulation of the Problem	41
3.3. Solution of the Covering Problem	42
3.4. Proof of Theorem 2.2	52
4. The Problem of Illumination	55
4.1. Formulation of the Problem	55
4.2. Solution of the Problem of Illumination	57
4.3. The Equivalence of the Last Two Problems	58
4.4. Division and Illumination of Unbounded Convex Figures	63
<i>Remarks</i>	66
