<i>Preface</i>	v
1. Dimension of a Local Ring	1
1.1 Nakayama's lemma	1
1.2 Prime ideals	2
1.3 Noetherian modules	4
1.4 Modules of finite length	6
1.5 Hilbert's basis theorem	8
1.6 Graded rings	9
1.7 Filtered rings	11
1.8 Local rings	13
1.9 Regular local rings	17
2. Modules over a Local Ring	19
2.1 Support of a module	19
2.2 Associated prime ideals	20
2.3 Dimension of a module	22
2.4 Depth of a module	24
2.5 Cohen-Macaulay modules	25
2.6 Modules of finite projective dimension	27
2.7 The Koszul complex	29
2.8 Regular local rings	31
2.9 Projective dimension and depth	32
2.10 \mathfrak{J} -depth	34
2.11 The acyclicity theorem	36
2.12 An example	39

3.	Divisor Theory	43
3.1	Discrete valuation rings	43
3.2	Normal domains	44
3.3	Divisors	46
3.4	Unique factorization	47
3.5	Torsion modules	48
3.6	The first Chern class	49
3.7	Regular local rings	51
3.8	Picard groups	51
3.9	Dedekind domains	54
4.	Completion	57
4.1	Exactness of the completion functor	57
4.2	Separation of the \mathfrak{J} -adic topology	59
4.3	Complete filtered rings	60
4.4	Completion of local rings	61
4.5	Structure of complete local rings	63
5.	Injective Modules	65
5.1	Injective modules	65
5.2	Injective envelopes	67
5.3	Decomposition of injective modules	68
5.4	Matlis duality	70
5.5	Minimal injective resolutions	73
5.6	Modules of finite injective dimension	74
5.7	Gorenstein rings	77
6.	Local Cohomology	81
6.1	Basic properties	81
6.2	Local cohomology and dimension	84
6.3	Local cohomology and depth	84
6.4	Support in the maximal ideal	85
6.5	Local duality for Gorenstein rings	87
7.	Dualizing Complexes	89
7.1	Complexes of injective modules	89
7.2	Complexes with finitely generated cohomology	93
7.3	The evaluation map	96

7.4	Existence of dualizing complexes	98
7.5	The codimension function	100
7.6	Complexes of flat modules	102
7.7	Generalized evaluation maps	105
7.8	Uniqueness of dualizing complexes	107
8.	Local Duality	109
8.1	Poincaré series	109
8.2	Grothendieck's local duality theorem	113
8.3	Duality for Cohen–Macaulay modules	117
8.4	Dualizing modules	119
8.5	Locally factorial domains	121
8.6	Conductors	122
8.7	Formal fibers	125
9.	Amplitude and Dimension	129
9.1	Depth of a complex	130
9.2	The dual of a module	136
9.3	The amplitude formula	137
9.4	Dimension of a complex	139
9.5	The tensor product formula	142
9.6	Depth inequalities	144
9.7	Condition S_r of Serre	148
9.8	Factorial rings and condition S_r	152
9.9	Condition S'_r	155
9.10	Specialization of Poincaré series	158
10.	Intersection Multiplicities	161
10.1	Introduction to Serre's conjectures	161
10.2	Filtration of the Koszul complex	163
10.3	Euler characteristic of the Koszul complex	167
10.4	A projection formula	170
10.5	Power series over a field	171
10.6	Power series over a discrete valuation ring	175
10.7	Application of Cohen's structure theorem	178
10.8	The amplitude inequality	181
10.9	Translation invariant operators	182
10.10	Todd operators	184
10.11	Serre's conjecture in the graded case	187

11. Complexes of Free Modules	189
11.1 McCoy's theorem	189
11.2 The rank of a linear map	191
11.3 The Eisenbud-Buchsbaum criterion	194
11.4 Fitting's ideals	196
11.5 The Euler characteristic	199
11.6 McRae's invariant	203
11.7 The integral character of McRae's invariant	205
<i>Bibliography</i>	207
<i>Index</i>	211
