Preface	v
Part I: RUNLENGTH AND CONFIDENCE INTERVALS	
1. Introduction	3
2. Terminating Simulations and Elementary Statistics	8
3. Assumptions of the t Statistic, and Alternatives	14
3.1 Independence	14
3.2 Common variance and mean	16
3.3 Normality	16
3.4 Robustness of the t statistic	18
3.5 Distribution-free statistics	23
3.6 Robust procedures	26
3.7 Conclusion	27
4. Responses Other Than the Mean	28
4.1 Introduction	28
4.2 Difference of two means: Classical procedures	28
4.3 Differences of two means: Assumptions and alternatives	32
4.4 Variances	35
4.5 Quantiles or percentiles	36
4.6 Percentage or proportion	39
4.7 Distribution $F(x)$	41
4.8 Multiple criteria and simultaneous inference	41
4.9 Subset selection	43
5. Sample Size or Runlength	46
5.1 Introduction	46
5.2 Estimating a single mean	47
5.3 Estimating responses other than single mean	50
5.4 Hypothesis testing	51
5.5 Sequential likelihood ratio test	54
5.6 Multiple ranking procedures	55
6. Elementary Steady-State Concepts	58

7. Analyzing Nonterminating Simulations	63
7.1 Replicated runs	63
7.2 "Independent" subruns of fixed length: Batching	65
7.3 Independent cycles: Renewal approach	69
7.4 Reducing nonnormality: Grouping	76
7.5 Jackknifing	77
7.6 Other approaches	78
7.7 Responses other than the mean	79
8. Applications	84
Appendixes	87
1. Elementary statistical concepts	87
2. Goodness-of-fit tests	94
3. Confidence interval based on sign test	95
4. Behrens-Fisher problem: $\sigma_1^2 \neq \sigma_2^2$	96
5. Wilcoxon signed rank test	97
6. Distribution-free test for $\sigma_1^2 = \sigma_2^2$	98
7. Tests for two correlated sample variances	98
8. Transformations for constant variance	99
9. Bonferroni inequality	100
10. Subset procedures	101
11. Double-sampling procedure for quantile estimation	102
12. Sample size for estimating $\delta = \mu_1 - \mu_2$	105
13. Sample size in testing approach	106
14. Sequential likelihood ratio test	108
15. SPRT-like selection procedure	109
16. Schruben, Singh, and Tierney (1982) test for initialization bias	110
17. Renewal approach for various responses	111
Exercises	113
Notes	119
Solutions to Exercises	128

PART II: STRATEGIC ISSUES

A. REGRESSION ANALYSIS	
9. Introduction	133
10. Types of Variables	135
10.1 Measurement scales	138
10.2 Risk and sensitivity analysis	143
10.3 Optimization and what-if	145
11. Metamodeling	147
12. Basic Regression Analysis	151
13. Least Squares: Assumptions and Alternatives	158
13.1 Collinear matrix X	158
13.2 Linear model	160
13.3 Constant variances	161

13.4	Independence	169
13.5	Normality	175
13.6	Specification and validation	185
14.	Revising False Metamodels	197
14.1	Transformations	197
14.2	Higher order models	198
14.3	Smaller domain	200
15.	Optimization of Simulated Systems	202
15.1	Response surface methodology: Basics	202
15.2	Alternative methods, and applications	205
16.	Miscellaneous	207
16.1	Sensitivity analysis: When (not) to use it	207
16.2	Sample size	207
16.3	Numerical aspects	209
16.4	Mean squared error versus minimum bias	209
17.	Applications	210
17.1	Survey	210
17.2	Case study: Rotterdam harbor	210
17.3	Case study: Keypunching at the Tilburg computer center	214
18.	Summary	217
	Appendixes	220
18.	Coding of variables	220
19.	Risk analysis on regression models	221
20.	Inverse regression in control problems	224
21.	Tests for common variances	225
22.	M/M/1 queues and common random numbers	227
23.	Rank regression	228
24.	Lack-of-fit tests	229
	Exercises	234
	Notes	239
	Solutions to Exercises	251
B.	EXPERIMENTAL DESIGN	
19.	Introduction	259
20.	An Example	262
20.1	One factor at a time	264
20.2	All combinations of factor levels	267
20.3	Incomplete factorial: 2^{3-1} design	269
21.	The Classical Model	272
21.1	Two-level factors	273
21.2	Two or more levels	275
22.	Interactions	280
22.1	Quantitative factors	280
22.2	Qualitative factors	280
22.3	Qualitative factors at two levels only	282

23.	Analysis: Tests	285
23.1	ANOVA sums of squares	286
23.2	Replication	289
23.3	Assumptions	291
23.4	Applications in simulation	292
24.	Constructing 2^{k-p} Designs	294
24.1	The 2^{3-1} example	294
24.2	The 2^{k-1} designs	295
24.3	The 2^{k-p} designs	296
24.4	Saturated 2^{k-p} designs	298
25.	Resolution III, IV, and V Designs	301
25.1	Resolution III designs	301
25.2	Resolution IV designs	303
25.3	Resolution V designs	309
26.	Response Surface Designs	312
26.1	Central composite design	312
26.2	Other RSM designs	314
27.	Other Designs and Applications	317
28.	Too Many Factors: Screening	320
28.1	Random designs	321
28.2	Group-screening designs	323
29.	Stagewise Experimentation	329
30.	Final Evaluation	334
	Appendixes	341
	25. Scheffé's S procedure	341
	26. Linear transformations in experimental designs	341
	Exercises	346
	Notes	351
	Solutions to Exercises	358
	References	364
	Author Index	409
	Subject Index	421
