<b>Preface to the Second Edition</b>	<b>viii</b>
<b>Preface to the First Edition</b>	<b>x</b>
<b>1 Physicochemical Foundations</b>	<b>1</b>
1.1 Generalities	1
1.2 Classification of Solvents	4
1.3 Solvents in the Workplace and the Environment	6
1.4 Some Essential Thermodynamics and Kinetics: Tendency and Rate	7
1.5 Equilibrium Considerations	7
1.6 Thermodynamic Transfer Functions	9
1.7 Kinetic Considerations: Collision Theory	10
1.8 Transition-State Theory	11
1.9 Reactions in Solution	16
1.10 Diffusion-Controlled Reactions	16
1.11 Reaction in Solution and the Transition-State Theory Problems	18 21
<b>2 Unreactive Solvents</b>	<b>23</b>
2.1 Intermolecular Potentials	23
2.2 Activity and Equilibrium in Nonelectrolyte Solutions	24
2.3 Kinetic Solvent Effects	28
2.4 Solvent Polarity	30
2.5 Electrostatic Forces	30
2.6 Electrolytes in Solution	33

2.7	Solvation	36
2.8	Single Ion Solvation	39
2.9	Ionic Association	42
2.10	Solvent Mixtures	47
2.11	Salt Effects	53
	Problems	55
<b>3</b>	<b>Reactive Solvents</b>	<b>57</b>
3.1	Specific Solute/Solvent Interactions	57
3.2	Hydrogen Bonding	58
3.3	Acids and Bases in Solvents	59
3.4	Brønsted–Lowry Acids and Bases	60
3.5	Acidity Functions	62
3.6	Acids and Bases in Kinetics	65
3.7	Lewis Acids and Bases	76
3.8	Hard and Soft Acids and Bases (HSAB)	77
3.9	Scales of Hardness or Softness	78
3.10	Acids and Bases in Reactive Aprotic Solvents	82
3.11	Extremes of Acidity and Basicity	83
3.12	Oxidation and Reduction	83
3.13	Acidity/Redox Diagrams	84
3.14	Unification of Acid–Base and Redox Concepts	86
	Problems	87
<b>4</b>	<b>Chemometrics: Solvent Effects and Statistics</b>	<b>89</b>
4.1	Linear Free Energy Relationships	89
4.2	Correlations between Empirical Parameters and Other Measurable Solvent Properties	91
4.3	Representation of Correlation Data on the Hemisphere	95
4.4	Some Particular Cases	101
4.5	Acidity and Basicity Parameters	106
4.6	Base Softness Parameters	110
4.7	Conclusion	111
<b>5</b>	<b>Theories of Solvent Effects</b>	<b>112</b>
5.1	Introduction: Modeling	112
5.2	Quantum-Mechanical Methods	113
5.3	Statistical-Mechanical Methods	119
5.4	Integral Equation Theories	123
5.5	Solvation Calculations	123
5.6	Some Results	126
	Problems	139

<b>6</b>	<b>Dipolar Aprotic Solvents</b>	<b>140</b>
6.1	Introduction	140
6.2	Acidities in DMSO and the H-Scale in DMSO–H <sub>2</sub> O Mixtures	142
6.3	Use of Thermodynamic Transfer Functions	144
6.4	Classification of Rate Profile-Medium Effect Reaction Types	147
6.5	Bimolecular Nucleophilic Substitution	149
6.6	Proton Transfer	152
6.7	D <sub>2</sub> –HO <sup>−</sup> Exchange Problems	153 154
<b>7</b>	<b>Examples of Other Solvent Classes</b>	<b>155</b>
7.1	Introduction	155
7.2	Acidic Solvents	155
7.3	Basic Solvents	158
7.4	Chiral Solvents	161
<b>8</b>	<b>New Solvents and Green Chemistry</b>	<b>164</b>
8.1	Neoteric Solvents	164
8.2	Supercritical Fluids	164
8.3	Ionic Liquids	167
8.4	Low-Transition-Temperature Mixtures	173
8.5	Bio-Based Solvents	174
8.6	Fluorous Solvents	174
8.7	Switchable Solvents	174
8.8	Green Solvent Chemistry	176
<b>9</b>	<b>Concluding Observations</b>	<b>182</b>
9.1	Choosing a Solvent	182
9.2	<i>Envoi</i>	184
	<b>Appendix (Tables listing parameters, selected values)</b>	<b>185</b>
	<b>Answers</b>	<b>197</b>
	<b>References</b>	<b>199</b>
	<b>Index</b>	<b>214</b>
