Preface to the Second Edition	xxi
Preface to the First Edition	xxiii
Acknowledgments	xxvii
List of Abbreviations	xxxiii
Infrared Spectra Reprinted with Permission from SBDS	xxxv
Chapter 1 Introduction	1
1.1 Brief History of Organic Chemistry	1
1.2 Variety and Beauty of Organic Molecules	15
Notes	22
Chapter 2 Why Is an Acid–Base Theme Important?	23
2.1 Acids and Bases in General Chemistry	24
2.2 Acids and Bases in Organic Chemistry	26
2.3 There Are Two Acid–Base Definitions: How Are They Related?	29
2.4 Acid and Base Strength	32
2.5 Electronegativity and Atom Size	32
2.5.1 Electronegativity	33
2.5.2 Atom Size	34
2.6 Determination of Acid–Base Strength Based on Electronegativity and Size Arguments	35
2.6.1 Why Is HI More Acidic Than HF?	36
2.6.2 Why Is Water More Acidic Than Ammonia?	37
2.6.3 Why Is Ammonia a Stronger Base Than Water?	38
2.6.4 Why Is $^-NH_2$ More Basic Than NH_3 ?	38
2.6.5 Why Is Sulfuric Acid Less Acidic Than Perchloric Acid?	38
2.6.6 Why Is HCl a Stronger Acid Than Formic Acid, Which Is Stronger Than Ethanol?	40
2.7 Lewis Acids and Bases	41
2.8 Why Is Acid–Base Chemistry a Theme for Organic Chemistry?	42
2.9 Biological Relevance	43
Correlation of Concepts with Homework	44
Answers to In-Chapter Questions	45
Homework	46
Notes	48
Chapter 3 Bonding	49
3.1 Orbitals and the Periodic Table	50
3.1.1 Atomic Orbitals	50
3.1.2 Nature of Atomic Orbitals	52
3.1.3 Electronic Configuration	53
3.2 Ionic Versus Covalent Chemical Bonds	55
3.3 Covalent Bonds	57
3.4 Strength of a Covalent Bond	57
3.5 Molecular Orbitals	59
3.6 Tetrahedral Carbons and sp^3 Hybridization	60
3.6.1 Mixing Carbon Atomic Orbitals Does Not Predict Real C–C Bonding!	60
3.6.2 Electron Promotion and sp^3 Hybridization	61

3.6.3	Structure of Methane	62
3.6.4	Carbon in Methane: Four Bonds Attached to a Central Locus	63
3.6.5	Carbon–Carbon Bond: Ethane.....	65
3.6.6	Valence Shell Electron Pair Repulsion Model.....	66
3.7	Breaking Covalent Bonds	67
3.8	Polarized Covalent σ -Bonds	69
3.8.1	Covalent Bond Between Carbon and a Heteroatom: Bond Polarization.....	70
3.8.2	Bond Polarity, Bond Moments, and Bond Strength.....	70
3.9	Biological Relevance	73
	Correlation of Homework with Concepts.....	73
	Answers to In-Chapter Questions.....	74
	Homework.....	76
	Notes.....	77
Chapter 4	Alkanes, Isomers, and an Introduction to Nomenclature	79
4.1	Fundamental Structure of Alkanes Based on the sp^3 -Hybrid Model	80
4.2	Millions of Alkane Hydrocarbons.....	81
4.2.1	Straight-Chain and Branched Alkanes	81
4.2.2	Isomers	81
4.3	Acid or Base Properties of Alkanes.....	83
4.4	Naming Millions of Isomers: Rules of Nomenclature: The IUPAC Rules of Nomenclature	84
4.4.1	Prefixes and the Longest Unbranched Chain.....	84
4.4.2	Substituents (Alkyl Groups).....	86
4.4.3	Common Names	88
4.4.4	Substituents (Halogens).....	88
4.4.5	Multiple Substituents.....	89
4.4.6	Complex Substituents.....	91
4.5	Rings Made of Carbon: Cyclic Compounds.....	92
4.6	Combustion Analysis and Empirical Formulas.....	94
4.7	Biological Relevance	96
	Correlation of Homework with Concepts.....	98
	Answers to In-Chapter Questions.....	100
	Homework.....	102
	Notes.....	105
Chapter 5	Functional Groups.....	107
5.1	Introducing a Functional Group: Alkenes.....	109
5.1.1	sp^2 -Hybridized Carbon and the Double Bond.....	109
5.1.2	Alkenes: The $C=C$ Functional Group.....	111
5.1.3	Alkene Nomenclature: ENE for Alkenes	112
5.2	Acid–Base Properties of Alkenes	113
5.3	Hydrocarbon Functional Groups: Alkynes.....	114
5.3.1	sp -Hybridized Carbon and the Triple Bond.....	114
5.3.2	Alkynes: The $C\equiv C$ Functional Group.....	115
5.3.3	Nomenclature for Alkynes: YNE for Alkynes	115
5.3.4	Acid–Base Reactions of Alkynes	116
5.4	Hydrocarbons with Several π -Bonds.....	117
5.5	Heteroatoms and Polarized Covalent σ -Bonds.....	119
5.6	Formal Charge.....	119
5.7	Reactive Intermediates	120
5.7.1	Carbocations (Carbenium Ions).....	121
5.7.2	Carbanions	122
5.7.3	Radicals.....	122

5.8	Heteroatom Functional Groups	123
5.8.1	Molecules with a Carbon–Halogen Bond (Alkyl Halides).....	123
5.8.2	Alcohols and Thiols.....	124
5.8.2.1	Alcohols.....	124
5.8.2.2	Thiols.....	125
5.8.3	Ethers and Dithioethers (Sulfides).....	126
5.8.4	Amines.....	128
5.9	Acid–Base Properties of Functional Groups.....	129
5.10	Physical Properties and Intermolecular Forces.....	132
5.10.1	Boiling Point.....	132
5.10.2	Noncovalent Bonding Interactions.....	133
5.10.3	Solubility.....	135
5.10.4	Melting Point.....	135
5.11	Functional Groups with Polarized π -Bonds.....	136
5.11.1	Carbonyl Group, C=O.....	136
5.11.2	Ketones and Aldehydes.....	137
5.11.3	Carboxylic Acids and Resonance.....	139
5.11.3.1	Structure and Nomenclature of Carboxylic Acids.....	139
5.11.3.2	Carboxylic Acids Are Brønsted–Lowry Acids.....	140
5.11.4	Double and Triple Bonds to Nitrogen.....	142
5.12	Benzene: A Special Cyclic Hydrocarbon.....	143
5.12.1	Aromaticity.....	144
5.12.2	Benzene as a Substituent: The Phenyl Group.....	145
5.13	Biological Relevance.....	145
	Correlation of Homework with Concepts.....	150
	Answers to In-Chapter Questions.....	151
	Homework.....	155
	Notes.....	161
Chapter 6	Acids, Bases, Nucleophiles, and Electrophiles.....	163
6.1	Acid–Base Equilibria.....	164
6.2	Factors That Influence K_a	166
6.2.1	Carboxylic Acids.....	166
6.2.2	Sulfonic Acids.....	167
6.3	Factors That Influence the Strength of a Carboxylic Acid.....	168
6.3.1	Stability of the Conjugate Base.....	168
6.3.2	Structural Variations: Inductive Effects.....	168
6.3.3	Solvent Effects.....	171
6.4	Energetics and Reaction Curves.....	172
6.4.1	Free Energy and Activation Energy.....	172
6.4.2	Reversible Acid–Base Reaction.....	176
6.5	Alcohols and Amines Are Acids.....	177
6.5.1	Alcohols Are Acids.....	177
6.5.2	Amphoterism.....	178
6.5.3	Amines Are Acids.....	179
6.6	Hydrogen Atom Attached to a Carbon Is an Acid.....	179
6.6.1	Terminal Alkynes Are Weak Acids.....	179
6.6.2	α -Hydrogen Atoms and Carbonyls.....	179
6.7	Acid–Base Reaction of Alkenes with Mineral Acids.....	180
6.8	Lewis Acids and Bases.....	182
6.8.1	Why Do Brønsted–Lowry and Lewis Acids and Bases Have Separate Definitions?.....	182
6.8.2	Lewis Acids.....	183

6.8.3	Lewis Bases.....	184
6.8.4	Lewis Acid–Base Complex.....	184
6.9	Organic Bases.....	185
6.9.1	Nitrogen Atom as a Base: Amines.....	185
6.9.2	Alcohols Are Bases.....	189
6.9.3	Ethers Are Bases.....	190
6.9.4	Carbonyl Compounds Are Bases.....	191
6.10	Nucleophiles.....	192
6.10.1	Alkoxide Nucleophiles (Williamson Ether Synthesis).....	192
6.10.2	Reactions of Alcohols: Preparation of Halides and Sulfonate Esters.....	193
6.11	Biological Relevance.....	194
	Correlation of Homework with Concepts.....	196
	Answers to In-Chapter Questions.....	197
	Homework.....	201
	Notes.....	204
Chapter 7	Chemical Reactions, Bond Energy, and Kinetics.....	207
7.1	Chemical Reaction.....	208
7.2	Free Energy: Influence of Enthalpy and Entropy.....	210
7.2.1	Free Energy Equation.....	210
7.2.2	Spontaneity of a Reaction.....	211
7.3	Bond-Dissociation Enthalpy and Reactions.....	212
7.4	Transition States.....	213
7.5	Energetics: Starting Materials, Transition States, Intermediates, and Products on a Reaction Curve.....	214
7.6	Competing Reactions.....	216
7.7	Reaction Curves and Intermediates.....	217
7.8	Mechanisms.....	218
7.9	Why Does a Chemical Reaction Occur? Defining a "Reactive" Center.....	221
7.10	Reversible Chemical Reactions.....	222
7.11	Kinetics.....	224
7.11.1	Reaction Rate and First-Order Reactions.....	224
7.11.2	Second-Order Reactions.....	227
7.11.3	Half-Life.....	229
7.12	No Reaction.....	229
7.13	Biological Relevance.....	230
	Correlation of Homework with Concepts.....	232
	Answers to In-Chapter Questions.....	233
	Homework.....	234
	Notes.....	236
Chapter 8	Rotamers and Conformation.....	237
8.1	Rotamers.....	238
8.1.1	Staggered and Eclipsed Rotamers.....	238
8.1.2	Torsional Strain: Steric Hindrance and Energy Barriers.....	240
8.2	Longer Chain Alkanes.....	241
8.2.1	Ethane Derivatives.....	241
8.2.2	Butane.....	242
8.2.3	"Zigzag" Conformation.....	244
8.3	Conformations of Alkenes and Alkynes: Introducing π -Bonds.....	245
8.4	Influence of Heteroatoms on the Rotamer Population.....	246
8.4.1	Halogen Substituents.....	246
8.4.2	OH or NH Groups in Alcohols or Amines.....	247
8.4.3	Introduction of a Carbonyl.....	249

8.5	Cyclic Alkanes	249
8.5.1	Are Cyclic Alkanes Flat?	249
8.5.2	Torsion (Pitzer) Strain	251
8.5.3	Conformations of C ₃ –C ₅ Cycloalkanes	251
8.5.4	Conformationally Mobile Cyclohexane	253
8.5.4.1	Chair Cyclohexane	253
8.5.4.2	Other Conformations of Cyclohexane	255
8.6	Substituted Cyclohexanes	257
8.6.1	A ^{1,3} -Strain	257
8.6.2	Strain in Dimethylcyclohexanes	259
8.7	Larger Rings	260
8.7.1	Cycloheptane	260
8.7.2	Medium-Size Rings: Another Type of Transannular Strain	260
8.7.3	Conformation and Transition States for Cyclization Reactions	261
8.8	Cyclic Alkenes	262
8.9	Introducing Heteroatoms Into a Ring	262
8.9.1	Oxygen	262
8.9.2	Nitrogen	264
8.10	Biological Relevance	265
	Correlation of Homework with Concepts	267
	Answers to In-Chapter Questions	268
	Homework	271
	Notes	276
Chapter 9	Stereoisomers: Chirality, Enantiomers, and Diastereomers	277
9.1	Stereogenic Carbons and Stereoisomers	278
9.1.1	Mirror Images and Symmetry	278
9.1.2	Fischer Projections	281
9.2	Absolute Configuration [(<i>R</i>) and (<i>S</i>) Nomenclature]	282
9.3	Specific Rotation: A Physical Property	287
9.3.1	Physical Properties of Enantiomers	287
9.3.2	Observed Rotation	288
9.3.3	Specific Rotation	289
9.4	Relationship of Specific Rotation and Absolute Configuration	290
9.5	Mixtures of Enantiomers and Racemates	291
9.6	Alkenes	292
9.6.1	Alkene Stereoisomers	293
9.6.2	<i>Cis</i> and <i>Trans</i> Nomenclature System	293
9.6.3	(<i>E</i>) and (<i>Z</i>) Nomenclature System	294
9.6.4	(<i>E/Z</i>) Versus <i>Cis–Trans</i>	294
9.6.5	<i>Cis</i> and <i>Trans</i> Substituents Attached to Rings	295
9.7	Diastereomers	296
9.7.1	Two Stereogenic Centers	296
9.7.2	2 ⁿ Rule	297
9.7.3	Meso Compounds: Symmetry in Molecules with Stereogenic Centers	297
9.7.4	Molecules with Three or More Stereocenters	299
9.8	Stereogenic Centers in Cyclic Molecules	300
9.9	Stereogenic Centers in Complex Molecules	302
9.9.1	Bicyclic Molecules: Nomenclature	302
9.9.2	Bicyclic Molecules: (<i>R/S</i>) Configuration	303
9.9.3	Polycyclic Amines and Electron Lone Pairs	304
9.10	Optical Resolution	304
9.11	Biological Relevance	306
	Correlation of Homework with Concepts	310

Answers to In-Chapter Questions.....	312
Homework.....	315
Notes.....	322

Chapter 10 Acid–Base Reactions of π -Bonds: Addition Reactions.....	323
10.1 Alkenes and Acid–Base Chemistry.....	325
10.2 Carbocation Intermediates.....	325
10.2.1 Carbocation Stability.....	325
10.2.2 Regioselectivity with Unsymmetrical Alkenes.....	326
10.2.3 Carbocation Rearrangements.....	330
10.2.4 Why Does a Hydrogen Atom Migrate and Not a Methyl or Ethyl?.....	332
10.3 Alkenes React with Weak Acids in the Presence of an Acid Catalyst.....	333
10.4 Alkenes React as Lewis Bases with Dihalogens.....	335
10.4.1 Diastereoselectivity in Reactions of Cyclic Alkenes.....	337
10.4.2 Diastereoselectivity in Reactions of Acyclic Alkenes.....	338
10.4.3 Reaction with Aqueous Solutions of Halogens (Hypohalous Acids).....	339
10.5 Alkenes React as Lewis Bases with Borane.....	340
10.5.1 Four-Center Transition State.....	341
10.5.2 Oxidation of Alkylboranes to Alcohols.....	342
10.5.3 Alkylboranes and Alkenes.....	344
10.6 Alkenes React as Lewis Bases with Mercury(II) Compounds.....	346
10.7 Alkynes React as Brønsted–Lowry Bases or Lewis Bases.....	348
10.7.1 Reaction with Acids, HX.....	349
10.7.2 Hydration.....	350
10.7.3 Dihalogenation.....	351
10.7.4 Oxymercuration.....	351
10.7.5 Hydroboration.....	352
10.8 Oxidation Reactions of Alkenes.....	353
10.8.1 Oxidation of Alkenes (Dihydroxylation).....	353
10.8.2 Oxidation of Alkenes (Epoxidation).....	355
10.8.3 Oxidative Cleavage: Ozonolysis.....	357
10.9 Nonionic Reactions: Radicals and Alkene Polymerization.....	360
10.9.1 Formation of Radicals.....	360
10.9.2 Anti-Markovnikov Addition to Alkenes.....	361
10.9.3 Alkene Polymerization.....	363
10.10 Synthetic Transformations.....	367
10.11 Organization of Reaction Types.....	368
10.12 Biological Relevance.....	370
Correlation of Homework with Concepts.....	370
Answers to In-Chapter Questions.....	372
Homework.....	377
Notes.....	385

Chapter 11 Nucleophiles: Lewis Base–Like Reactions at sp^3 Carbon.....	387
11.1 Alkyl Halides, Sulfonate Esters, and the Electrophilic C–X Bond.....	388
11.2 Nucleophiles and Bimolecular Substitution (the S_N2 Reaction).....	390
11.2.1 Nucleophilic Approach to the Electrophilic Carbon.....	390
11.2.2 Reaction Rate.....	392
11.2.3 Energy of Activation and the S_N2 Transition State.....	393
11.2.4 Role of the Solvent.....	396
11.2.5 Leaving Groups in the S_N2 Reaction.....	398
11.3 Functional Group Transformations via the S_N2 Reaction.....	399
11.3.1 Halide Nucleophiles.....	399
11.3.2 Alkoxide Nucleophiles (the Williamson Ether Synthesis).....	399

11.3.3	Alkyne Anions (Making a Carbon–Carbon Bond)	400
11.3.4	Amine Nucleophiles	401
11.3.5	Amine Surrogates: Azide	402
11.3.6	Amine Surrogates: Cyanide Nucleophiles (Making a Carbon–Carbon Bond)	403
11.3.7	Amine Surrogates: Phthalimide	404
11.3.8	Phosphine Nucleophiles	404
11.4	Tertiary Halide Reacts with a Nucleophile When the Solvent Is Water	405
11.4.1	S_N1 Reaction	406
11.4.2	Relative Stability and Reactivity of Carbocations Revisited	407
11.4.3	S_N1 Reaction and Stereochemistry	408
11.4.4	Carbocation Rearrangements Revisited	409
11.5	Solvolysis Reactions of Alkyl Halides	409
11.6	Preparation of Halides by Substitution Reactions	410
11.6.1	Alcohols React as Bases with Mineral Acids	410
11.6.2	Sulfur and Phosphorous Halide Reagents	411
11.7	Reactions of Ethers	414
11.7.1	Ethers React as Brønsted–Lowry Bases	414
11.7.2	Epoxides React as Brønsted–Lowry Bases	415
11.7.3	Nucleophilic Substitution Reactions of Epoxides	416
11.8	Free Radical Halogenation of Alkanes	417
11.8.1	Homolytic Cleavage of Halogens	417
11.8.2	Estimation of Product Percentages for Radical Halogenation of Alkanes	420
11.8.3	<i>N</i> -Bromosuccinimide and <i>N</i> -Chlorosuccinimide	421
11.9	Synthetic Transformations	421
11.10	Organization of Reaction Types	423
11.11	Biological Relevance	425
	Correlation of Homework with Concepts	426
	Answers to In-Chapter Questions	427
	Homework	432
	Notes	440
Chapter 12	Bases-Induced Elimination Reactions	441
12.1	Bimolecular Elimination	442
12.1.1	Alkyl Halides React with Strong Bases	443
12.1.2	Regioselectivity and Hammond's Postulate	444
12.1.3	E2 Anti-Transition State	446
12.2	Stereochemical Consequences of the E2 Reaction	447
12.3	E2 Reaction in Cyclic Molecules	449
12.4	Unimolecular Elimination: The E1 Reaction	451
12.5	Intramolecular Elimination	453
12.6	1,3-Elimination: Decarboxylation	456
12.7	Elimination Reactions of Vinyl Halides: Formation of Alkynes	458
12.8	Functional Group Exchanges Based on Elimination	458
12.9	Organization of Reaction Types	459
12.10	Biological Relevance	460
	Correlation of Homework with Concepts	461
	Answers to In-Chapter Questions	462
	Homework	464
	Notes	469
Chapter 13	Substitution and Elimination Reactions Can Compete	471
13.1	Few Simplifying Assumptions	472
13.2	Protic versus Aprotic and Water	473
13.3	Nucleophilic Strength Versus Base Strength	474
13.4	Nature of the Halide	474

13.5	What About Secondary Halides?	475
13.6	Strength and Limitations of the Simplifying Assumptions	476
13.7	When Do the Assumptions Fail?	478
	Correlation of Homework with Concepts	479
	Answers to In-Chapter Questions	479
	Homework	480
	Notes	483
Chapter 14	Spectroscopic Methods of Identification	485
14.1	Light and Energy	486
14.1.1	Energy as a Wave	487
14.1.2	Electromagnetic Spectrum	487
14.2	Mass Spectrometry	488
14.2.1	Mass Spectrometer	489
14.2.2	Formation of the Molecular Ion	490
14.2.3	Daughter Ions and the Mass Spectrum	491
14.2.4	Isotopic Peaks and Determining a Molecular Formula	493
14.2.5	Mass Spectral Fragmentation as a Structural Probe (Common Fragmentations)	496
14.3	Infrared Spectroscopy	498
14.3.1	Absorbing Infrared Light (Molecular Vibrations)	498
14.3.2	Infrared Spectrophotometer	500
14.3.3	Infrared Spectrum	501
14.3.4	Functional Group Absorptions	503
14.4	Nuclear Magnetic Resonance Spectroscopy	510
14.4.1	Hydrogen Atom Is a Magnet	510
14.4.2	Nuclear Magnetic Resonance Instrumentation	512
14.4.3	Resonance and Number of Signals per Nucleus	514
14.4.4	Proton NMR Spectrum	515
14.4.5	Chemical Shift: Shielding and Deshielding	516
14.4.6	Chemical Shift: Anisotropy	518
14.4.7	Proton NMR Correlation Table	520
14.4.8	Peak Areas and Integration: Counting Hydrogen Ratios	521
14.4.9	Neighboring Protons Influence the Magnetic Field: Multiplicity	522
14.4.10	Structure Correlation Using Chemical Shift and Coupling Constant	526
14.5	Identifying Monofunctional Molecules	527
14.6	Carbon-13 NMR Spectroscopy: Counting the Carbons	529
14.7	Biological Relevance	532
	Correlation of Homework with Concepts	535
	Answers to In-Chapter Questions	536
	Homework	539
	Notes	546
Chapter 15	Organic Molecules That Contain Alkali Metals or Transition Metals (Organometallics)	547
15.1	Introducing Magnesium into a Molecule	548
15.2	Reaction of Aryl and Vinyl Halides with Magnesium	552
15.3	Grignard Reagents Are Bases	553
15.4	Grignard Reagents Are Poor Nucleophiles with Alkyl Halides	553
15.5	Organolithium Reagents	555
15.5.1	Reaction of Alkyl Halides with Lithium	555
15.5.2	Organolithium Reagents Are Potent Bases	559
15.6	Organocuprates	560
15.7	Organometallic Disconnections	562
15.8	Organization of Reaction Types	563
15.9	Biological Relevance	564
	Correlation of Homework with Concepts	565

Answers to In-Chapter Questions.....	566
Homework.....	568
Notes.....	570
Chapter 16 Carbonyl Compounds: Structure, Nomenclature, Reactivity.....	571
16.1 Carbonyl Group.....	572
16.2 Aldehydes and Ketones: Nomenclature	572
16.2.1 Ketones.....	573
16.2.2 Aldehydes.....	574
16.2.3 Diketones, Dialdehydes, and Ketoaldehydes	575
16.3 Chemical Reactivity of Ketones and Aldehydes.....	576
16.4 Carboxylic Acids: Nomenclature and Properties	579
16.5 Dicarboxylic Acids.....	581
16.6 Dicarboxylic Acids Have Two pK_a Values	582
16.7 Carboxylic Acid Derivatives: Structure and Nomenclature	583
16.8 Acyl Substitution with Carboxylic Acid Derivatives.....	586
16.9 Sulfonic Acids.....	587
16.10 Biological Relevance	588
Correlation of Homework with Concepts.....	594
Answers to In-Chapter Questions.....	595
Homework.....	597
Notes.....	602
Chapter 17 Oxidation.....	603
17.1 Defining an Oxidation.....	604
17.2 Oxidation of Alcohols with Chromium (VI)	605
17.2.1 Chromium Trioxide and Related Compounds	605
17.2.2 Oxidation of Alcohols	606
17.2.3 PCC and PDC.....	609
17.2.4 Swern Oxidation	610
17.3 Oxidation of Alkenes Revisited	611
17.3.1 Dihydroxylation of Alkenes.....	611
17.3.2 Epoxidation of Alkenes	612
17.4 Oxidative Cleavage	614
17.4.1 Ozonolysis.....	614
17.4.2 Oxidative Cleavage Reactions of Diols.....	615
17.5 Summary of Functional Group Exchanges	616
17.6 Organization of Reaction Types	618
17.7 Biological Relevance	619
Correlation of Homework with Concepts.....	621
Answers to In-Chapter Questions.....	621
Homework.....	624
Notes.....	627
Chapter 18 Reactions of Aldehydes and Ketones.....	629
18.1 Chemical Reactivity of the Carbonyl Group.....	630
18.2 Reaction of Aldehydes or Ketones with Strong Nucleophiles	631
18.2.1 Alkyne Anions Are Strong Nucleophiles.....	631
18.2.2 Grignard Reagents Are Nucleophiles.....	633
18.2.3 Organolithium Reagents Are Nucleophiles	635
18.2.4 Cyanide Is a Carbon Nucleophile.....	635
18.3 Weak Nucleophiles: Reversible Versus Irreversible Acyl Addition.....	637
18.3.1 Chloride Ion.....	637
18.3.2 Water: A Weak Nucleophile.....	638

18.4	Alcohols: Weak Nucleophiles That Yield Reactive Products.....	640
18.4.1	Acyl Addition of Alcohols to Carbonyls.....	640
18.4.2	Exploiting the Acid–Base Reaction of Carbonyls: Acid Catalysis	640
18.4.3	If Acetal Formation Is Reversible, How Is an Acetal Isolated?	643
18.4.4	Ketals.....	644
18.4.5	Acetals or Ketals May Be Converted Back to the Aldehyde or Ketone	645
18.4.6	Cyclic Acetals and Ketals	646
18.4.7	Dithioacetals and Dithioketals.....	647
18.5	Amines Are Nucleophiles.....	648
18.5.1	Primary Amines React to Yield Imines.....	649
18.5.2	Secondary Amines React to Yield Enamines.....	651
18.5.3	Hydroxylamine, Hydrazines, and Related Nucleophiles.....	653
18.6	Carbon–Carbon Bond-Forming Reactions and Functional Group Modification.....	656
18.7	Organization of Reaction Types	657
18.8	Biological Relevance	658
	Correlation of Homework with Concepts.....	659
	Answers to In-Chapter Questions.....	660
	Homework.....	666
	Notes.....	673

Chapter 19	Reduction.....	675
19.1	Defining a Reduction.....	676
19.2	Hydrides as Reducing Agents	677
19.2.1	Sodium Borohydride.....	677
19.2.2	Lithium Aluminum Hydride	679
19.3	Hydride Reduction of Other Functional Groups.....	681
19.4	Catalytic Hydrogenation.....	682
19.4.1	Hydrogen Gas Requires a Transition Metal.....	682
19.4.2	Hydrogenation of Alkenes.....	684
19.4.3	Hydrogenation of Alkynes.....	685
19.4.4	Hydrogenation of Aldehydes and Ketones.....	686
19.4.5	Hydrogenation of Acid Derivatives.....	687
19.5	Dissolving Metal Reductions.....	689
19.5.1	Reduction of Ketones and Aldehydes.....	689
19.5.2	Reduction of Alkynes.....	690
19.5.3	Reduction of Benzene.....	691
19.5.4	Reductions Using a Metal and an Acid.....	692
19.6	Summary of Functional Group Exchanges	694
19.7	Organization of Reaction Types	695
19.8	Biological Relevance	698
	Correlation of Homework with Concepts.....	699
	Answers to In-Chapter Questions.....	700
	Homework.....	702
	Notes.....	705

Chapter 20	Carboxylic Acid Derivatives and Acyl Substitution.....	707
20.1	Chemical Reactivity of Carboxylic Acid Derivatives.....	709
20.2	Acyl Substitution: Hydrolysis of Acid Derivatives.....	710
20.2.1	Acid-Catalyzed Hydrolysis of Acid Derivatives	710
20.2.2	Base-Catalyzed Hydrolysis of Acid Derivatives.....	712
20.2.3	Leaving Groups and Hydrolysis of Acid Derivatives.....	717
20.3	Preparation of Acid Chlorides.....	717
20.3.1	Reaction of Carboxylic Acids with Thionyl Chloride	718
20.3.2	Other Halogenating Agents	719

20.4	Preparation of Acid Anhydrides	720
20.5	Preparation of Esters	722
20.5.1	Acid-Catalyzed Reaction of Alcohols with Carboxylic Acids.....	722
20.5.2	Transesterification	723
20.5.3	Acid Chlorides React with Alcohols	724
20.5.4	DCC Coupling.....	725
20.5.5	Cyclic Esters (Lactones).....	727
20.6	Preparation of Amides	728
20.6.1	Carboxylic Acids React with Ammonia and Amines: Pyrolysis of Amine Salts.....	728
20.6.2	Reaction of Amines with Acid Derivatives.....	729
20.6.3	DCC Coupling of Amines and Acids.....	730
20.6.4	Cyclic Amides (Lactams).....	731
20.6.5	Imides.....	732
20.7	Reaction of Carboxylic Acid Derivatives with Carbon Nucleophiles.....	733
20.7.1	Grignard Reagents and Organolithium Reagents.....	733
20.7.2	Lithium Dialkylcuprate Reagents.....	734
20.8	Reaction of Organometallics with Electrophilic "Carbonyl" Molecules.....	735
20.8.1	Reaction with Carboxylic Acids.....	735
20.8.2	Reaction with Carbon Dioxide.....	736
20.8.3	Reaction with Nitriles.....	737
20.9	Dicarboxylic Acid Derivatives	738
20.9.1	Acid Dichlorides and Diesters	738
20.9.2	Cyclic Anhydrides and Imides.....	740
20.10	Baeyer–Villiger Oxidation	741
20.11	Sulfonic Acids and Derivatives.....	743
20.11.1	Sulfonyl Chlorides	743
20.11.2	Sulfonate Esters	744
20.11.3	Sulfonamides	745
20.12	Nitrate Esters, Sulfate Esters, and Phosphate Esters.....	746
20.13	Nitriles Are Carboxylic Acid Derivatives.....	749
20.14	Carbon–Carbon Bond-Forming Reactions and Functional Group Exchanges of Acid Derivatives.....	750
20.15	Organization of Reaction Types.....	752
20.16	Biological Relevance	755
	Correlation of Homework with Concepts.....	759
	Answers to In-Chapter Questions.....	760
	Homework.....	767
	Notes	776
Chapter 21	Aromatic Compounds and Benzene Derivatives.....	779
21.1	Benzene and Aromaticity.....	780
21.2	Functionalized Benzene Derivatives and a New Nomenclature System.....	785
21.2.1	Alkyl Substituents on the Benzene Ring.....	786
21.2.2	Functional Groups on the Benzene Ring	787
21.3	Electrophilic Aromatic Substitution.....	791
21.3.1	Aromatic Substitution: Halogenation, Nitration, and Sulfonation.....	791
21.3.2	Friedel–Crafts Alkylation.....	794
21.3.3	Friedel–Crafts Acylation.....	796
21.4	Disubstituted Benzene Derivatives.....	797
21.4.1	Regioselectivity.....	797
21.4.2	Ipsso Carbon and Arenium Ion Stability	799
21.4.3	Activating Substituents.....	801
21.4.4	Deactivating Substituents.....	803
21.4.5	Halogen Substituents.....	805
21.4.6	Aniline and Aniline Derivatives.....	806
21.5	Polysubstituted Benzene Derivatives	806

21.6	Reduction of Aromatic Compounds.....	808
21.6.1	Reduction of the Benzene Ring by Catalytic Hydrogenation.....	808
21.6.2	Birch Reduction.....	809
21.6.3	Reduction of Substituents Attached to the Benzene Ring.....	811
21.7	Aromaticity in Monocyclic Molecules Other Than Benzene.....	813
21.8	Polynuclear Aromatic Hydrocarbons.....	815
21.8.1	Naphthalene, Anthracene, and Phenanthrene.....	816
21.8.2	Aromatic Substitution Reactions.....	817
21.9	Nucleophilic Aromatic Substitution.....	818
21.9.1	Nucleophilic Substitution with Halobenzenes.....	818
21.9.2	Nucleophilic Substitution with Substituted Halobenzenes.....	820
21.10	Aromatic Amines and Diazonium Salts.....	821
21.10.1	Formation of Diazonium Compounds.....	821
21.10.2	Reactions of Diazonium Salts.....	822
21.11	Benzyne Intermediates.....	825
21.12	Aromatic Disconnections and Functional Group Exchange Reactions.....	827
21.13	Synthesis of Aromatic Compounds.....	828
21.14	Organization of Reaction Types.....	829
21.15	Biological Relevance.....	831
	Correlation of Homework with Concepts.....	836
	Answers to In-Chapter Questions.....	837
	Homework.....	846
	Notes.....	855
Chapter 22	Enolate Anions: Acyl Addition and Acyl Substitution.....	857
22.1	Aldehydes and Ketones Are Weak Acids.....	859
22.1.1	Acidity of the α Proton of Ketones and Aldehydes.....	859
22.1.2	Formation of Enolate Anions.....	862
22.2	Nonnucleophilic Bases.....	864
22.3	Enolate Alkylation.....	866
22.4	Acyl Addition Reactions.....	866
22.4.1	Aldol Condensation.....	867
22.4.2	Mixed Aldol Condensations.....	869
22.5	Enolate Anions from Unsymmetrical Ketones.....	870
22.5.1	Removing the More Acidic Proton in Unsymmetrical Ketones.....	870
22.5.2	Mixed Aldol Condensations Under Thermodynamic Conditions.....	873
22.5.3	Kinetic Versus Thermodynamic Control.....	874
22.6	Intramolecular Aldol Condensation.....	876
22.7	Ester Enolate Anions.....	877
22.7.1	Alkylation of Ester Enolate Anions.....	878
22.7.2	Reactions of Ester Enolates and Ketones or Aldehydes.....	878
22.7.3	Claisen Condensation.....	879
22.7.4	Intramolecular Condensation: The Dieckmann Condensation.....	882
22.7.5	Malonic Ester Enolate Anions.....	883
22.8	Decarboxylation.....	884
22.9	Knoevenagel Reaction, Malonic Ester Synthesis, and Acetoacetic Acid Synthesis.....	885
22.10	Phosphorus Ylids and the Wittig Reaction.....	886
22.11	New Synthetic Possibilities.....	890
22.12	Organization of Reaction Types.....	893
22.13	Biological Relevance.....	895
	Correlation of Homework with Concepts.....	897
	Answers to In-Chapter Questions.....	898
	Homework.....	906
	Notes.....	912

Chapter 23	Difunctional Molecules: Dienes and Conjugated Carbonyl Compounds	913
23.1	Conjugated Dienes	915
23.2	Conjugated Carbonyl Compounds.....	917
23.3	Detecting Conjugation with Spectroscopy.....	918
23.3.1	UV Spectroscopy and UV Spectrophotometers	919
23.3.2	Frontier Molecular Orbitals and Electron Promotion	921
23.3.3	Conjugation Shifts the Wavelength of Absorption.....	923
23.3.4	Identifying Conjugated Molecules Using UV Spectroscopy	924
23.3.4.1	Conjugated Dienes.....	925
23.3.4.2	Conjugated Carbonyls.....	925
23.4	Reactions of Conjugated π -Bonds.....	926
23.4.1	Addition of HX to Dienes.....	926
23.4.2	Addition of X_2 to Dienes	928
23.4.3	Reaction of HX and X_2 with Conjugated Carbonyls.....	929
23.5	Michael Addition	930
23.5.1	Enolate Anions and Organocuprates.....	931
23.5.2	Robinson Annulation	933
23.5.3	Reduction	935
23.6	Hydroperoxide Anions and Conjugated Carbonyls.....	935
23.7	Synthetic Possibilities.....	936
23.8	Organization of Reaction Types	937
23.9	Biological Relevance	939
	Correlation of Homework with Concepts.....	941
	Answers to In-Chapter Questions	942
	Homework.....	945
	Notes	950
Chapter 24	Difunctional Molecules: Pericyclic Reactions	951
24.1	The Diels–Alder Reaction.....	952
24.1.1	Frontier Molecular Orbitals: HOMO and LUMO.....	955
24.1.2	A Molecular Orbital Explanation of the Diels–Alder Reaction.....	957
24.2	Reactivity of Dienes and Alkenes.....	959
24.3	Selectivity in the Diels–Alder Reaction.....	961
24.3.1	Alder Endo Rule.....	961
24.3.2	Diastereoselectivity.....	963
24.3.3	Regioselectivity.....	964
24.4	Sigmatropic Rearrangements.....	965
24.5	Review of Synthetic Transformations.....	968
24.6	Organization of Reaction Types	970
24.7	Biological Relevance	971
	Correlation of Homework with Concepts.....	972
	Answers to In-Chapter Questions	972
	Homework.....	974
	Notes	978
Chapter 25	Retrosynthesis and Synthesis	979
25.1	What Is Synthesis?	980
25.2	Synthesis Based on a Specified Starting Material for a Given Target	983
25.2.1	Retrosynthesis Assuming Ionic or Polarized Intermediates	983
25.2.2	Synthetic Equivalents.....	985
25.2.3	Functional Group Manipulation.....	989
	Correlation of Homework with Concepts.....	991

Answers to In-Chapter Questions	992
Homework.....	993
Note	995
Chapter 26 Heteroaromatic Compounds	997
26.1 Nitrogen in an Aromatic Ring.....	998
26.1.1 Five-Membered Rings.....	998
26.1.2 Six-Membered Rings.....	1000
26.2 Oxygen and Sulfur in an Aromatic Ring.....	1002
26.3 Substitution Reactions in Monocyclic Heterocyclic Aromatic Compounds.....	1004
26.3.1 Five-Membered Rings.....	1004
26.3.2 Six-Membered Rings.....	1006
26.3.3 Nucleophilic Aromatic Substitution	1007
26.4 Reduced Forms of Heterocycles.....	1008
26.4.1 Reduced Nitrogen-Containing Heterocycles	1008
26.4.2 Reduced Oxygen-Containing Heterocycles.....	1009
26.5 Heteroaromatic Compounds with More Than One Ring.....	1011
26.6 Aromatic Substitution Reactions of Polycyclic Heterocycles.....	1014
26.7 Biological Relevance	1016
Correlation of Homework with Concepts.....	1017
Answers to in-Chapter Questions	1018
Homework.....	1022
Notes.....	1024
Chapter 27 Multifunctional Compounds: Amino Acids and Peptides	1025
27.1 Review of Reactions That Form Amines	1027
27.1.1 Reaction of Ammonia or Amines with Alkyl Halides	1027
27.1.2 Reductive Amination	1028
27.1.3 Direct Reduction of Functional Groups	1028
27.2 Reactions of Amines.....	1031
27.3 Difunctional Molecules: Amino Acids	1031
27.3.1 Characteristics of Amino Acids	1031
27.3.2 Structure of α -Amino Acids	1034
27.3.3 Reactions of α -Amino Acids.....	1038
27.4 Synthesis of α -Amino Acids	1040
27.5 Biological Relevance: Peptides Are Poly(amides) of Amino Acid Residues.....	1043
27.6 Biological Relevance: Proteins and Enzymes Are Poly(peptides).....	1050
27.6.1 Important Poly(peptides).....	1050
27.6.2 Peptide Identification	1052
27.6.2.1 Amino Acid Identification.....	1052
27.6.2.2 <i>N</i> -Terminus Amino Acid Identification.....	1055
27.6.2.3 <i>C</i> -Terminus Amino Acid Identification	1058
27.7 Determination of the Primary Structure of a Peptide.....	1061
27.8 New Synthetic Methodology	1062
Correlation of Homework with Concepts.....	1063
Answers to In-Chapter Questions.....	1064
Homework.....	1068
Notes.....	1073
Chapter 28 Multifunctional Compounds: Carbohydrates	1075
28.1 Polyhydroxy Carbonyl Compounds	1076
28.1.1 Monosaccharides	1077
28.1.2 Mutarotation	1082

28.1.3	Anomeric Effect	1084
28.1.4	Ketose Monosaccharides.....	1086
28.2	Disaccharides, Trisaccharides, Oligosaccharides, and Polysaccharides.....	1088
28.3	Reactions of Carbohydrates.....	1092
28.3.1	Oxidation and Reduction.....	1093
28.3.2	Selective Reactions of Carbohydrates.....	1096
28.4	Biological Relevance: Nucleosides and Nucleotides	1097
28.4.1	Ribose–Purines and Ribose–Pyrimidines.....	1097
28.4.2	Preparation of Nucleosides.....	1099
28.5	Biological Relevance: Polynucleotides	1101
	Correlation of Homework with Concepts.....	1107
	Answers to In-Chapter Questions.....	1109
	Homework.....	1112
	Notes.....	1114

Index	1115
