Open Cycle Solar Desiccant Cooling System – A Solar Integrated Concept for Building Air-Conditioning

Reihe **6**: Energietechnik

Nr. **361**

Contents

1	Introduction	1
1.1	Schema of Open cycle solid desiccant systems of interest	1
1.2	Previous work and bibliography study	7
1.3	Aims of the dissertation	8
2	The Sun	10
2.1	Astrophysical Explanation	10
2.2	Solar Radiant Flux	12
2.3	Solar Spectrum	13
3	Solar Collector	18
3.1	Principles and Concepts of Solar Flat-Plate Collector	19
3.2	Dynamic behaviour of the solar collector	20
3.2.1	Differential equation system of a 3-node-model	20
3.2.2	Reduction of the problem to a 1-node-model	22
3.3	Comparison of models and insolation set-function response	28
4	Properties of desiccant materials	35
4.1	Drying curve of hygroscopic materials	36
4.2	Binding of humidity in an adsorbent	38
4.2.1	Binding processes	39
4.2.2	Adsorption	39
4.2.3	Chemical absorption	40
4.2.4	Classification of adsorption isotherms	40
4.2.5	Capillary-porous hysteresis	42
4.2.6	Bonding enthalpy	45
4.2.7	Transfer coefficients	47
4.2.8	Moisture transfer coefficient	50
5	The mathematics of diffusion in an adsorbent	52
5.1	Adsorption of Gas	52
5.2	Non-isothermal Moisture Transport in Silica Gel packed Beds	53
5.2.1	Balance and transport relations	53
5.2.2	Mass balance	55

5.2.3	Energy balance	58
5.3	Numerical Approach of the Mass Balance in Silica Gel Packed Beds	60
5.3.1	Numerical approach	60
6	Desiccant Cooling System Optimization	72
6.1	Desiccant Cooling System Set-Up	73
6.2	Henning's Model	75
6.3	Jurinak's Model	78
6.3.1	Combined potentials of heat and mass transfer of the regenerator matrix	79
6.3.2	Howe's TRNSYS Subroutine	79
6.4	Kitoko's Proposals	83
6.5	Description of TRNSYS Types	86
6.6	Comparison of the Different Models	89
6.7	Standard deviation	95
7	Desiccant Cooling System Experimental Set-Up	97
7.1	Human body comfort and air-conditioning	97
7.2	Environmental aspects of a desiccative and evaporative cooling system	99
7.3	Description of the complete solar integrated desiccant cooling system and its simulation with TRNSYS	101
7.3.1	Detailed flow chart of the Riesa's solar integrated desiccant cooling system	101
7.3.2	General schema of the solar hybrid desiccant cooling system	106
7.4	Experimental investigations	110
7.4.1	Speed of the Mass flow	110
7.4.2	Temperature and relative humidity of the working medium	110
7.4.3	Data recorder	111
7.5	Comparison of experimental with predicted results, and discussions	111
7.5.1	System performance at the regeneration temperature of c. 80°C	118
7.5.2	System performance at the regeneration temperature of c. 70°C	120
7.5.3	System performance at the regeneration temperature of c. 55°C	122
7.6	Energy consumption	124
7.7	Economical rentability	129
8	Conclusions and Recommendations	131
A	TRNSYS component configurations	133
