

Frank Hättich

Quantum Processes

A Whiteheadian Interpretation of
Quantum Field Theory

agenda Verlag
Münster
2004

Contents

Introduction	xi
I Whitehead's Process Philosophy	1
1 Actuality	3
1.1 The self-creative processes of concrescence	4
1.1.1 Concrescence as creative process	6
1.1.2 Concrescence as non-spatiotemporal process	9
1.1.3 Genetical supersession	9
1.2 A comment on the "birth-date" of occasions	12
1.3 The world-process	13
1.3.1 Actual worlds	14
1.3.2 A comment on the concept of evolvment and the open- ness of the future	19
2 Potentiality's interplay with actuality	23
2.1 The extensive continuum	26
2.2 Eternal objects	31
2.2.1 Ingression and the two species of eternal objects	33
2.2.2 Simple and complex eternal objects	36
2.2.3 Comparison with two other theories of universals	40
2.2.4 The compatibility of eternal objects	41
2.2.5 Abstractive hierachies	43
2.2.6 Functioning of eternal objects in the constitution of oc- casions	46
2.3 The underlying activity	49
2.3.1 The limited and individualized activity of a concrescence process	51

2.3.2	The individuality of occasions	55
2.3.3	The envisaging property of the underlying activity	56
2.3.4	The objective immortality of occasions	58
2.4	Other-creating processes of transition	62
2.4.1	The dative phase of a transition process	62
2.4.2	The conformal phase of a transition process	64
2.4.3	Transition as deterministic causal process	65
2.4.4	Transition as non-spatiotemporal process	70
2.5	Two problems of Whitehead's ontology	70
2.5.1	The first problem	71
2.5.2	The second problem	71
2.5.3	A resolution for both problems	73
2.6	Bifurcating activities and Whitehead's ontology	77
2.6.1	Consequences for the individuality of occasions	77
2.6.2	The creative character of a bifurcating activity	79
2.6.3	Bifurcating activities and efficient causation	80
2.7	Order of envisagement and expansion	82
2.7.1	The order of envisagement and the causal expansion of the world	82
2.7.2	The spatiotemporal expansion of the world	86
2.8	On the compatibility with STR	92
2.8.1	Superluminal causation	92
2.8.2	Distinguished foliation of spacetime	97
3	A first comparison with quantum physics	99
3.1	Discrete events	99
3.2	Autonomous decisions	101
3.3	Atomicity of actualization	102
II	Algebraic Quantum Field Theory	105
4	The role of the algebraic approach	107
4.1	The Lagrangian approach	108
4.2	The axiomatic approach	109
4.3	The algebraic approach	110
5	The standard axioms of AQFT	113
5.1	Local observables	114
5.2	States and probabilities	117
5.3	The further axioms of AQFT	122

III	The Connection	135
6	The extensive continuum	137
7	Objective eternal objects	141
8	Subjective and mixed eternal objects	143
8.1	Properties in quantum physics	144
8.1.1	From classical to quantum properties	144
8.1.2	Consequences of non-commutativity	148
8.1.3	Against negative properties	151
8.1.4	On conjunctive and disjunctive properties	153
8.1.5	Probabilities for quantum properties	155
8.1.6	Definite, indefinite and possible quantum properties	157
8.1.7	Quantum properties as universals?	166
8.2	“Indirect” representation of eternal objects	169
8.3	No simple properties in QFT	175
8.3.1	Consequences for subjective eternal objects	178
8.3.2	Consequences for abstractive hierachies	179
8.3.3	Against conjunctive subjective eternal objects	181
8.3.4	Simple decisions revisited	183
8.4	The representation of abstractive hierachies	183
9	The underlying activity’s manifestations	189
9.1	The underlying activity itself	189
9.2	Its manifestation at some stage	192
9.3	Reinterpreting probability statements	195
10	Representing transition processes	199
10.1	The dative phase I	199
10.2	Bell’s theorem, non-separability, and all that	206
10.2.1	The EPR-experiment	206
10.2.2	Bell’s theorem	209
10.2.3	Analyzing the factorizability condition	210
10.2.4	Non-separability in QM	219
10.2.5	Non-separability in AQFT	222
10.3	The dative phase II	226
10.4	The conformal phase	229

11 Representing concrescence processes	237
11.1 Hierachies and activities	237
11.2 The degree of divisibility of activities	242
11.3 The degree of individuality of occasions	245
12 Summing up	249
A Lattices and Boolean algebras	253
B Operator algebras on Hilbert spaces	257
B.1 Hilbert spaces	257
B.2 Bounded operators	261
B.3 Algebras of bounded operators	266
Acknowledgements	271
References	273
