

CONTENTS

Preface

xiii

1. Using Catalysts

I. Catalysts Are Chemicals	1
II. Reactant Transport	1
III. The Stirred Reactor	2
IV. The Fixed Bed Reactor	3
V. The Trickle Reactor	6
VI. The Jiggling Catalyst Bed	7
VII. The Moving Bed of Catalyst	7
VIII. The Fluidized Bed	8
IX. Conversion versus Selectivity	9
X. Naming Catalysts	9
XI. Getting Catalyst Samples	9
References	10

2. Burning Coke off Catalysts

I. Source of Coke	11
II. Burning in a Fixed Bed	11
III. Burning in Single Granules	12
IV. Diffusion Limited Coke Burning	13

V. Effect of Oxidizing-Reducing Activity	13
VI. Burning Coke off Powdered Catalysts	14
References	14

3. Isomerization

I. Isomerization of Paraffin Hydrocarbons	15
II. Cycloparaffins	18
III. Isomerization of Olefin Hydrocarbons	19
IV. Isomerization and Hydroisomerization of Alkylaromatic Hydrocarbons	21
V. Aromatic Carboxylic Acids	22
VI. Propylene Oxide to Allyl Alcohol	23
References	23

4. Catalytic Cracking of Petroleum

I. Catalytic Cracking Reactors	26
II. Catalyst Regeneration	28
III. Cracking Catalysts	29
IV. Catalyst Evaluation	31
V. Poisons	31
VI. Suppliers of Proven Catalysts	32
References	35

5. Dehydration

I. Dehydration of Alcohols to Olefinic Hydrocarbons	36
II. Dehydration of Glycols to Dienes	38
III. Suppliers of Proven Catalysts	38
References	40

6. Dehydrogenation

I. Paraffins to Olefinic Hydrocarbons	41
II. Olefins to Diolefinic Hydrocarbons	46
III. Ethylbenzene to Styrene	47
IV. Cycloparaffins	48
V. Cycloolefins	49
VI. Alcohols to Aldehydes and Ketones	49
VII. Methanol to Hydrogen and Carbon Monoxide	51
VIII. Ammonia to Hydrogen and Nitrogen	51
IX. Methane and Ammonia to Hydrogen Cyanide	52
References	53

7. Catalytic Reforming of Naphthas

I. Platinum Reforming	54
II. Molybdena-Alumina Reforming	60
III. Chromia-Alumina Reforming	62
References	63

8. Polymerization

I. Selective Polymerization of Propylene to Dimers	64
II. Oligomerization of Ethylene	66
III. Polybutenes	67
IV. Olefinic Gases to Gasolines	67
V. Dimerization of Higher Olefins	69
VI. Olefin Disproportionation (Olefin Dismutation)	69
VII. α -Olefinic Hydrocarbons to Solids	72
VIII. Isobutylene to Rubber	78
IX. Butadiene to Liquids	79
X. Dienes to Rubbers and Plastics	79
XI. Acetylene to Vinylacetylene	84
References	84

9. Alkylation

I. Alkylation of Isobutane with Butylenes	87
II. Isobutane Plus Propylene and Pentenes	91
III. Alkylation with Other Saturated Hydrocarbons Plus Olefins	91
IV. Isobutane Plus Ethylene	92
V. Catalyst Poisons	92
VI. Alkylation of Aromatic Hydrocarbons	92
VII. Transalkylation of Alkylaromatic Hydrocarbons	94
VIII. Alkylation of Phenol	94
IX. Alkylation of the Side Chains of Alkylaromatic Hydrocarbons	95
References	96

10. Catalysts for Free Radical Polymerizations

I. Free Radical Polymerizations	97
II. Catalysts or Promoters	99
III. Safety	99
IV. Suppliers of Proven Products	99

11. Synthesis Gas and Hydrogen Production

I. Synthesis Gas from Gaseous Hydrocarbons	101
II. Synthesis Gas from Naphthas	102
III. Hydrogen Production and the Shift Process	104
IV. Ammonia Synthesis Gas	106
V. Metallurgical Gases	107
References	107

12. Gas Purification

I. Removing Traces of Combustible Material from Air	108
II. The Catalytic Muffler (Unleaded Fuels)	110
III. The Catalytic Muffler (Leaded Fuels)	110
IV. Removing Sulfur Compounds from Producer, Coke Oven, Hydrogen, or Hydrocarbon Gas Streams	112
V. Removing CO, CO ₂ , or O ₂ from H ₂ Methanation	115
VI. Removing O ₂ or H ₂	118
VII. Removing Nitrogen Oxides from H ₂ , CO, Natural Gas, or the Exhaust from a Nitric Acid Plant	119
VIII. Removing Diolefins and Acetylenes from Olefin Streams	120
References	124

13. Hydrogenation

I. Ortho-Para Hydrogen Conversion	125
II. Hydrogenation of Olefins	126
III. Hydrogenation of Acetylenes to Olefins	134
IV. Steam Cracker Naphtha	134
V. Hydrogenation of Fats and Oils	136
VI. Hydrogenation of Aromatic Hydrocarbons	138
VII. Hydrogenation of Nitroaromatic Hydrocarbons	139
VIII. Hydrogenation of Aniline	141
IX. Hydrogenation of Pyridine and Quinolines	141
X. Hydrogenation of Phenol	142
XI. Hydrogenation of Nitriles	142
XII. Hydrogen Sulfide Synthesis	143
References	144

14. Synthesis of Ammonia and Methanol

I. New Technology	146
II. Ammonia Synthesis	146
III. Methanol Synthesis	149
References	151

15. Hydrogenation of Carbonyl Groups

I. Fats and Oils	152
II. Other Esters	153
III. Carbon-Carbon Double Bonds	153
IV. Aldehydes and Ketones	153
V. Amides	154
VI. Catalyst Activity	154
VII. Poisons	155
VIII. Suppliers of Proven Catalysts	155
References	156

16. Hydrorefining

I. Gasoline or Naphtha Processing	158
II. Coal Tar Distillates	159
III. Jet Fuel and Kerosine	159
IV. Home Heating Oil and Diesel Fuel	159
V. Hydrogenating Feed for Catalytic Cracking	160
VI. Tar Sands Products	161
VII. Lubricating Oils	161
VIII. Coal Tar Oils	162
IX. Shale Oil	163
X. Removing Metal Compounds	164
XI. Residual Oils and Asphalts	165
XII. Poisons	167
XIII. Regeneration	167
XIV. Presulfiding	168
XV. Suppliers of Proven Catalysts	169
References	171

17. Hydrocracking of Petroleum and Coal

I. Petroleum Distillates	173
II. Hydrodealkylation	171
III. Demethylation of Isoparaffins	178
IV. Hydrocracking for Lubricating Oils	178
V. Hydrocracking Petroleum Residuals or Coal	179
References	180

18. Oxidation (Inorganic)

I. Sulfur Dioxide to Sulfur Trioxide	182
II. H ₂ S to Sulfur	184
III. Ammonia to Nitric Acid	185
IV. Ammonia to Nitrous Oxide	187
V. HCl to Chlorine	187
References	188

19. Oxidation (Organic) Liquid Phase

I.	Ethylene to Acetaldehyde	189
II.	Acetone from Propylene and Methyl Ethyl Ketone from Butenes	190
III.	Vinyl Acetate from Ethylene (Liquid Catalyst)	191
IV.	Vinyl Acetate from Ethylene (Solid Catalyst)	192
V.	Alkyl Side Chains to Aromatic Acids	193
VI.	Siccatives (Paint Driers)	194
VII.	Aromatic Acids to Phenols—Benzoic Acid to Phenol	195
VIII.	Saturated Hydrocarbons to Alcohols	196
IX.	Acetaldehyde to Acetic Anhydride	196
X.	Acetic Acid from Methanol and Carbon Monoxide	197
XI.	Olefins to Neoacids	198
XII.	Glycol to Glyoxal	198
XIII.	Furfural to Furoic Acid	199
XIV.	Mercaptans to Disulfides (“Sweetening”)	199
XV.	Fuel Cells	201
	References	201

20. Oxidation (Organic) Vapor Phase

I.	Naphthalene or <i>o</i> -Xylene to Phthalic Anhydride Benzene to Maleic Anhydride	203
II.	Ethylene to Ethylene Oxide	205
III.	Higher Olefin Oxides	206
IV.	Alcohols to Aldehydes or Ketones	208
V.	Dimethyl Ether to Formaldehyde	209
VI.	<i>n</i> -Butenes to Butadiene	210
VII.	Propylene or Isobutylene to Unsaturated Aldehydes	210
VIII.	Higher Olefins to Dienes	210
IX.	Suppliers of Proven Catalysts	211
X.	Ammonia Plus Methane to Hydrogen Cyanide	211
XI.	Ammonia Plus Propylene to Acrylonitrile	212
XII.	Isobutylene Plus Ammonia to Methacrylonitrile	212
XIII.	Catalyst Suppliers	213
XIV.	HCl to Chlorine	213
XV.	Benzene to Chlorobenzene	213
XVI.	Oxychlorination or Oxyhydrochlorination	213
XVII.	Oxidation to Carbon Dioxide	214
	References	215

21. Miscellaneous Processes

I.	Oxo Process (Hydroformylation)	217
II.	Esterification	222
III.	Polyesters	222

IV. Transesterification	223
V. <i>Interesterification</i>	224
VI. Vinyl Acetate from Acetylene	224
VII. Acrylic Esters from Acetylene	225
VIII. Polyurthanes	226
IX. 2-Methyl-5-ethylpyridine	227
X. Aliphatic Amines	227
XI. Alkyl Mercaptans and Sulfides	228
XII. Ethanol to Butadiene	229
XIII. Ethanol Plus Crotonaldehyde to Butadiene	230
XIV. Urea to Melamine	230
XV. Hydration of Olefins to Alcohols	230
XVI. Saponification	231
XVII. Hydrolysis of Chlorobenzene to Phenol	232
XVI. Saponification	231
XVII. Hydrolysis of Chlorobenzene to Phenol	232
XVIII. Hydration of Acetylene	232
XIX. Chlorination	232
XX. Hydrochlorination and Hydrofluorination	233
XXI. Hydrohalogenation of Acetylene	233
XXII. Acrylonitrile from Acetylene	234
XXIII. Dehydrochlorination	234
XXIV. Removing Traces of Halides	235
XXV. Dehydrofluorination	235
XXVI. Fluorohydrocarbons from Chlorohydrocarbons	236
XXVII. Fischer-Tropsch Process	236
References	238

22. Catalyst Carriers and Supports

I. Active Catalyst Carriers	241
II. Inert Carriers and Supports	250
References	253
Author Index	255
Subject Index	265
