<b>Preface</b>	ix
<b>1. Some Greek Mathematics</b>	3
1.1 $\pi$ and Irrational Numbers: An Introduction to Greek Mathematics	3
The Number $\pi$	6
Irrational Numbers	10
Repeating Decimals	12
Focus: Archimedes	15
Exercises	17
1.2 Euclidean Geometry	19
Logic	21
Euclid's Definitions and Postulates	23
The First Thirty-Two Propositions	27
The Pythagorean Theorem	34
Aside: Poincaré Conjecture	37
Exercises	39
1.3 Greek Mathematics and Kepler	42
Regular Polyhedra	42
Euler's Formula	47
Conic Sections	51
Pre-Keplerian Theories of Planetary Motion	55
Kepler and the Regular Polyhedra	58
Kepler's Laws	61
Focus: Kepler	63
Exercises	67
<b>2. Non-Euclidean Geometry</b>	69
2.1 Formal Axiom Systems	69
Consistency	72
Independence	75
Equivalent Axioms	76
Hilbert's <i>Foundations of Geometry</i>	77

Aside: Russell's Paradox and Set Theory	80
Exercises	82
2.2 Precursors to Non-Euclidean Geometry	84
Playfair's Postulate	84
Angle Sums of Triangles	86
Saccheri's Approach	89
Gauss's Work	92
Focus: Gauss	94
Exercises	97
2.3 Hyperbolic Geometry	100
Bolyai and Lobachevsky	101
Some Theorems of Hyperbolic Geometry	106
Properties of Parallels and Divergent Lines	108
Area and Defect	113
Aside: Kant and Geometry	117
Exercises	118
2.4 Spherical Geometry	122
Flatland	124
Postulates	128
Propositions	132
Area and Excess	134
Consistency	136
Aside: A Flat Model of Spherical Geometry	137
Exercises	140
2.5 Models of Hyperbolic Geometry	143
Beltrami's Pseudosphere	144
The Klein-Beltrami Disk Model	147
The Poincaré Disk Model	148
Aside: Hyperbolic Paper	155
Exercises	158
2.6 The Geometry of the Universe	160
Higher-Dimensional Spaces	160
Riemann's Lecture	166
Special Theory of Relativity	167
General Theory of Relativity	170
The Large-Scale Geometry of the Universe	174
Focus: Albert Einstein	177
Exercises	180

---

<b>3. Number Theory</b>	182
3.1 Prime Numbers	182
Unique Factorization	183
Divisibility and Primes	184
The Infinitude of the Primes	187
The Prime Number Theorem	190
Mersenne Primes and Perfect Numbers	194
Aside: Fermat's Last Theorem	199
Exercises	204
3.2 The Euclidean Algorithm	208
Finding the GCD	208
Writing the GCD as a Combination of the Numbers	211
Linear Diophantine Equations	214
Aside: Proof of the Fundamental Theorem of Arithmetic	217
Exercises	219
3.3 Congruence Arithmetic	220
Addition and Multiplication	223
Exponentiation	225
Congruence Equations	229
Aside: Bases of Number Systems	232
Exercises	236
3.4 The Little Fermat Theorem	238
Two Proofs	240
Applications	242
Pseudoprimes	243
Aside: Primality Testing	244
Exercises	246
<b>4. Cryptography</b>	249
4.1 Some Basic Methods of Cryptography	249
Substitution Ciphers	249
The Enigma Ciphers	256
Focus: Alan Turing and His "Machine"	259
Exercises	265
4.2 Public Key Cryptography	267
The RSA Method	267
Signatures	273
Security	274
The Knapsack Method	277

---

Aside: Computational Complexity	280
Exercises	282
<b>5. Fractals</b>	<b>284</b>
5.1 Fractal Dimension	284
The Koch Curve	284
Similarity Dimension	287
Box Dimension and the Cantor Set	290
Fractals in Nature	295
Aside: Fractal Ferns and Image Compression	300
Exercises	306
5.2 Iteration and Computers	314
Population Growth	314
Computer Experiments	315
Fixed Points	319
Chaos	325
Bifurcation Diagrams	326
A Similar Family of Functions	329
Aside: Lorenz's Weather Forecast	330
Exercises	334
5.3 Mandelbrot and Julia sets	339
Complex Numbers	339
The Mandelbrot Set	341
Julia Sets	355
Newton's Method	363
Focus: Isaac Newton	366
Exercises	370
<b>Epilogue</b>	<b>377</b>
<b>Bibliography</b>	<b>379</b>
<b>Credits</b>	<b>383</b>
<b>Index</b>	<b>385</b>
