

Contents

1 ELEMENTARY METHODS—FIRST-ORDER DIFFERENTIAL EQUATIONS

1.1	Introduction and Definitions	1
1.1.1	Applications	3
1.2	Existence and Uniqueness	11
1.3	Variables Separable	18
1.3.1	Applications	21
1.4	First-Order Linear Differential Equations	29
1.4.1	Applications	33
1.5	Exact Differential Equations	41
1.5.1	Applications	45
1.6	Homogeneous Equations	50
1.6.1	Applications	52
1.7	Equations Reducible to First Order	55
1.7.1	Applications	56

2 LINEAR DIFFERENTIAL EQUATIONS

2.1	Introduction and Definitions	59
2.1.1	Applications	62
2.2	Linear Independence and Wronskians	67
2.3	Existence and Uniqueness of Solutions	76
2.4	Homogeneous Differential Equations with Constant Coefficients— The Characteristic Equation	81
2.5	Homogeneous Differential Equations with Constant Coefficients— The General Solution	86
2.5.1	Application	91
2.6	Homogeneous Equations with Variable Coefficients—Overview	96
2.7	Euler's Differential Equation	97
2.8	Reduction of Order	103

2.8.1	Applications	108
2.9	Solutions of Linear Homogeneous Differential Equations by the Method of Taylor Series	112
2.10	Nonhomogeneous Differential Equations	116
2.11	The Method of Undetermined Coefficients	120
2.11.1	Applications	125
2.12	Variation of Parameters	131

3 LINEAR SYSTEMS

3.1	Introduction and Basic Theory	138
3.1.1	Applications	145
3.2	The Method of Elimination	155
3.2.1	Applications	158
3.3	The Matrix Method	163
3.3.1	Applications	176

4 THE LAPLACE TRANSFORM

4.1	Introduction	181
4.2	Properties of the Laplace Transform	184
4.3	The Laplace Transform Applied to Differential Equations	194
4.4	Applications	200

5 SERIES SOLUTIONS OF SECOND-ORDER LINEAR EQUATIONS

5.1	Introduction	210
5.2	Review of Power Series	211
5.3	Ordinary Points and Singular Points	216
5.4	Power-Series Solutions About an Ordinary Point	219
5.4.1	Applications	226
5.5	Series Solutions About a Regular Singular Point	234
5.5.1	Applications	246

6 BOUNDARY VALUE PROBLEMS

6.1	Introduction and Solution of Boundary Value Problems	256
6.1.1	Applications	261
6.2	Eigenvalues and Eigenfunctions	264
6.2.1	Applications	269

7 NUMERICAL SOLUTIONS OF DIFFERENTIAL EQUATIONS

7.1	Introduction	274
7.2	Euler's Method	276
7.3	Taylor's-Series Methods	279
7.4	Runge-Kutta Methods	283
7.5	Systems of First-Order Differential Equations	288
7.6	Applications	292

8 NONLINEAR DIFFERENTIAL EQUATIONS AND SYSTEMS

8.1	Introduction	298
8.2	Existence and Uniqueness Theorems	298
8.3	Solutions and Trajectories of Autonomous Systems	301
8.4	Stability of Critical Points of Autonomous Systems	305
8.5	Phase Portraits of Autonomous Systems	311
8.6	Applications	322

APPENDIX A		
DETERMINANTS AND LINEAR SYSTEMS OF EQUATIONS		333

APPENDIX B		
PARTIAL FRACTION DECOMPOSITION		345

ANSWERS TO ODD-NUMBERED EXERCISES		351
