<i>Series preface</i>	ix
<i>Acknowledgments</i>	xi
<i>List of figures</i>	xiii
<i>Abbreviations and symbols</i>	xv
1 Introduction	1
1.1 Preamble	1
1.2 Weight-sensitive systems in phonology	4
1.3 Universals of weight	9
1.4 Scope and aims of this book	13
1.5 Overview of the constraint system for prominence mapping	17
2 Weight scales for stress	22
2.1 Introduction	22
2.2 Two theories of complex scales	27
2.3 Core apparatus	29
2.3.1 Moraic preliminaries	29
2.3.2 Mapping between weight and stress	31
2.3.3 Preliminary illustrations: Yana, Murik, Kelkar's Hindi	34
2.4 MAIN→VV and similar constraints	36
2.5 Coercion vs. Prominence: case studies	38
2.5.1 V < VC < VV < VVC in Kashmiri: the Coercion analysis	38
2.5.2 V < VC < VV < VVC in Pulaar: two problems for Coercion	42
2.5.3 V < VC < VV < VVC in Pulaar: the Prominence analysis	47
2.5.4 V < VC < VV in Chickasaw	49
2.5.5 V < VC < VV in Klamath	52
2.5.6 V < VC < VV in Maithili	55
2.5.7 V < VC < VV in Yapese	57
2.5.8 V < VC < VV in Finnish	57
2.5.9 V < VC < VV < VVC in Nanti	58
2.5.10 V < VC < VV in Tamil	60
2.5.11 V < VC < VV (etc.) in Kara	62
2.5.12 Coercion vs. Prominence beyond stress	63
2.6 Geminaes and stress	64
2.6.1 Sixty-seven languages with VC < VV for stress: VG almost always aligns with VC	64
2.6.2 VC < {VG, VV} in Cahuilla	66
2.6.3 VC < {VG, VV} in Gupta's Hindi?	68
2.6.4 VC < {VG, VV} in Sa'nani Arabic (and VC < VG in Amharic)	69

2.6.5	{VC, VG} < VV in Koasati and as the typological norm for VG in VC < VV systems	71
2.6.6	The weight of GV for stress	74
2.6.7	VG is arguably always heavy in V < VX systems (with special attention to Ngalakgan and Tashlhiyt Berber)	77
2.7	Alternative approaches to Skeletal Prominence	81
2.7.1	Vowel vs. Coda Prominence	81
2.7.2	The questionable existence of VV < VC for stress	83
2.7.3	Coda Prominence as an antidote to trimoraicity	86
2.8	Gradient weight for stress	88
2.8.1	VH \lesssim V \lesssim VC \lesssim VV in Hupa	88
2.8.2	V \lesssim VC \lesssim VV (etc.) in Yahi (Yana)	92
2.8.3	Skeletal structure in English	92
2.8.4	Other cases of gradient weight: Russian, Finnish, Italian, Spanish, and Portuguese	95
2.9	Conclusion	96
3	Prosodic minimality in isolation and in context	98
3.1	Introduction	98
3.2	Latin	102
3.2.1	Minimality as it applies to words in isolation	102
3.2.2	Minimality as it applies within cliticized structures	105
3.2.3	The interaction of minimality and resyllabification	108
3.2.4	Evidence for degenerate feet	111
3.2.5	Varying cliticizability	116
3.2.6	Latin minimality: conclusion	118
3.3	Māhārāṣṭrī Prakrit: gradient contextual prosodic minimality	120
3.4	Tamil	121
3.4.1	Overview of prosodic minimality in Tamil	122
3.4.2	Loanwords support the subminimality of VR	124
3.4.3	Rhotics are nongeminable in Tamil	124
3.4.4	VR is light in Tamil meter	126
3.4.5	The interaction of minimality and resyllabification	128
3.4.6	Analysis	130
3.4.7	The realization and sonority of Tamil coda rhotics	132
3.4.8	*μ/R: discussion	134
3.5	Conclusion	136
4	Quantitative meter: Categorical and gradient weight	137
4.1	Introduction	137
4.2	Variable weight due to optional processes	141
4.2.1	Optional resyllabification	141
4.2.2	Optional cluster or geminate compression	142
4.2.3	Optional correption in hiatus	143
4.2.4	Variable final vowel length	144

4.3	Superheavy avoidance	145
4.4	Gradient weight in meter I: positional discrepancies	147
4.4.1	Kalevala Finnish	147
4.4.2	Homeric Greek	149
4.4.3	Tamil and other languages	150
4.5	Gradient weight in meter II: final indifference	151
4.5.1	Homeric Greek	151
4.5.2	Classical Latin	152
4.6	Interval Theory	153
4.7	Conclusion	158
5	Prosodic end-weight and the stress–weight interface	160
5.1	Introduction	160
5.2	Constructions exhibiting end-weight	161
5.3	Non-phonological factors in end-weight	165
5.4	Phonological factors not involving weight	167
5.5	Subsyllabic factors in end-weight	168
5.5.1	Vowel length and quality	169
5.5.2	Onset size and sonority	171
5.5.3	Coda size and sonority	174
5.5.4	Stress level	177
5.6	The syllable-count effect in end-weight	178
5.6.1	The syllable-count effect in English	179
5.6.2	The syllable-count effect in Latin	188
5.6.3	The syllable-count effect in French	190
5.6.4	The syllable-count effect: conclusion	192
5.7	Summary of prosodic factors in end-weight	193
5.8	Explanations for prosodic end-weight	194
5.8.1	Final lengthening	194
5.8.2	Rhythm	198
5.8.3	Phonotactics	198
5.8.4	Complexity	199
5.9	Phrasal stress as an explanation for end-weight	201
5.9.1	Constraints	201
5.9.2	Stress-modulated weight	210
5.9.3	Multinomials	211
5.9.4	Onset sonority	213
5.10	End-weight in compounds	217
5.11	The Rhythm Rule	220
5.12	Beginning-weight	222
5.12.1	Overview of prosodic and syntactic beginning-weight	222
5.12.2	A pilot study of prosodic beginning-weight in Turkish	226
5.13	Prosodic vs. syntactic end-weight	228
5.14	Prosodic end-weight beyond binomials	229
5.15	Conclusion	229

6 Conclusion and further issues	232
6.1 The phonetics–phonology interface	233
6.2 Opacity	237
6.3 Onset effects and the domain of the weight percept	238
6.4 Categorical vs. gradient weight	239
<i>Appendix: Key constraints</i>	247
